

I'm not a robot

Shop Dolphin Premier® at participating ProLine™ Dealers. ProLine models include premium exclusive features like Nanofilters™, Waterline Cleaning and longer warranties. Serving Your Area When it comes to automatic pool cleaners, you can't go past a robotic cleaner. Robot cleaners use advanced computer technology to provide superior results. Robot cleaners are energy efficient and simple to use – just drop them in the water and let your robot do the rest! There are many robot cleaners on the market but you can't go past Dolphin cleaners. Today, we look at what you need to know about Dolphin robotic cleaners. Dolphin robotic pool cleaners were developed by Maytronics who lead the industry when it comes to domestic and commercial pool equipment. Maytronics have set the standard when it comes to technology and innovation and they continue to produce quality products which exceed consumer expectations. Dolphin robotic pool cleaners offer exceptional cleaning thanks to their innovative design. There's no difficult set up with your new robot – as soon as you get it home, it's ready to deliver precision results. The triple-active brushes of your Dolphin cleaner will remove dirt and debris while also saving energy due to the energy efficient motor. Your cleaner provides 100% coverage of the entire pool due to its ability to scan the surface and the quick, methodical cleaning pattern means no missed spots - the built-in intelligence means that you don't need to worry about your cleaner getting stuck in corners. Dolphin cleaners have superior suction so nothing is left behind for truly sparkling results. Your robot will clean all the way up the waterline for pristine results across the while pool. Your new Dolphin robot can help save you money not just due to the energy efficient motor but also due to the ability to reduce the amount of chemicals required and to save water due to reduced backwashing. In fact, the savings with your Dolphin robot can be up to \$400 each year and the need to backwash can be reduced by up to 30%. Unlike suction cleaners, your robot won't put any pressure on your existing equipment thanks to a separate filter bag or cartridge. Once your robot has finished its cycle, you don't have to do anything as it will shut down automatically. There are a number of Dolphin robot cleaners for you to choose from so you can find the right model for your lifestyle. We'll be talking about some of the most popular Dolphin robots on the market. Dolphin M3 - this is the perfect entry level robot which is ideal for pools which are up to 12 metres in length. With a two year warranty, the Dolphin M3 cleans and scrubs the floor of your pool using intelligent scanning technology. Dolphin M400 - this model is one of the most popular choices of the Dolphin models thanks to its ability to clean the walls, floor, and waterline. The cartridge filter offers ultrafine filtering for debris and it comes complete with a 3 year warranty. Dolphin M500 - this robot offers superior cleaning thanks to a super-speed scrubbing brush and multi-motor steering to ensure no surface is missed. The Dolphin M500 comes with a user-friendly app for the ultimate in convenience and control. Dolphin Liberty - in a world first, the Dolphin Liberty offers the world's first cordless pool robot for ultimate ease of use. Gyroscope technology allows for the most effective scanning of the surface of the pool and it also features multi-motor steering for optimal scanning and coverage. Dolphin S50 - if you want a quick and efficient robot, the S50 is for you with its 1.5 hour cycle time. Ideal for smaller pools or above ground pools, it will clean the floor of your pool and boasts a lightweight design with an easy to clean net cannister. Dolphin S200 - ideal for larger pool of up to 12 metres, the S200 provides debris-free water release and a top-access filtration system for easy emptying and washing. With ultra-fine filters to get rid of debris and a quick cycle time of two hours, this robot is a great all-rounder. Dolphin S300i - with the S300i, you can choose from a range of cycle lengths depending on your needs. The multi-layer filter removes fine and rough debris and it offers easy handling and emptying. You can also use the MyDolphin app for convenience and control. As with all robot pool cleaners, you need to take your dolphin out of the water after each use, rinse it off with a hose, let it air dry and reset it. It's as easy as that! If you're finding that the full filter indicator light is still on despite the filter being cleaned out, often all you need to do is remove the filter bag or cartridge again for a more thorough clean and then resetting your robot. If you find that your robot isn't climbing the walls like it's supposed to, it could be that the filter bag or cartridge is clogged and required a bit of attention. For any additional issues that you may encounter with your Dolphin robot, you can contact the company directly or speak to your pool technician for support. Pool Assist carry a range of robotic pool cleaners from a number of leading brands, including Dolphin pool cleaners. If you're unsure which Dolphin robotic pool cleaner is right for your pool, you can simply drop into one of our locations and speak with one of our team members.
