Chickenpox is a highly contagious disease caused by the varicella-zoster virus (VZV). It can cause a itching, a rash similar to blisters. Two doses of poultry vaccine is more than 90% effective in porrox prevention. When you vaccinate, you protect yourself and others in your family and community. This protection is especially important for people who cannot be vaccinated, such as those with a weakened immune system (the lowered body capacity to fight germs and disease), or pregnant women. Some people who are vaccinated against chickenpox can still get the disease. However, symptoms are usually milder with less or without blisters (they can only have red spots) and mild or no fever. The risk of getting smallpox after two doses of poultry vaccine is less than after a single dose of poultry vaccine. Talk to your health care provider if you have any questions about the smallpox vaccine. how to say varicella zoster. how to pronounce varicella zoster. how to say varicella zoster virus. how to diagnose varicella zoster
