Maslow's hierarchy of needs is a motivational theory in psychology comprising a five-tier model of human needs, often depicted as hierarchical levels within a pyramid. From the bottom of the hierarchy upwards, the needs are: physiological (food and clothing), safety (job security), love and belonging needs (friendship), esteem, and self-actualization
Needs lower down in the hierarchy must be satisfied before individuals can attend to needs higher up. Needs Hierarchy: The original hierarchy includes physiological, safety, love/belonging, esteem, and self-actualization needs. Later expansions add cognitive, aesthetic, and transcendence needs. Not Strictly Linear: While Maslow initially proposed
that lower needs must be relatively satisfied before higher ones, modern research suggests people often pursue multiple needs simultaneously. Cultural Variations: Different societies may prioritize needs differently. Individualistic vs. collectivist cultures, for example, can shape which needs take precedence. Practical Applications: In fields like
education, healthcare, and workplace management, Maslow's framework helps identify barriers to motivation and guides strategies to fulfill various needs. Criticisms: Maslow's biographical approach, cultural biases, and the debate over rigid vs. flexible ordering highlight the importance of viewing his theory as a starting point rather than an absolute
rule. What is Maslow's Hierarchy of Needs? According to Maslow, human needs were arranged in a hierarchy, with physiological (survival) needs at the bottom, and the more creative and intellectually oriented 'self-actualization' needs at the bottom, and the more creative and intellectually oriented 'self-actualization' needs at the bottom, and the more creative and intellectually oriented 'self-actualization' needs at the bottom, and the more creative and intellectually oriented 'self-actualization' needs at the bottom, and the more creative and intellectually oriented 'self-actualization' needs at the bottom, and the more creative and intellectually oriented 'self-actualization' needs at the bottom, and the more creative and intellectually oriented 'self-actualization' needs at the bottom, and the more creative and intellectually oriented 'self-actualization' needs at the bottom, and the more creative and intellectually oriented 'self-actualization' needs at the bottom, and the more creative and intellectually oriented 'self-actualization' needs at the bottom, and the more creative and intellectually oriented 'self-actualization' needs at the bottom, and the more creative and intellectually oriented 'self-actualization' needs at the bottom, and the more creative and intellectually oriented 'self-actualization' needs at the bottom, and the more creative and intellectually oriented 'self-actualization' needs at the bottom, and the more creative and intellectually oriented 'self-actualization' needs at the bottom, and the more creative and intellectually oriented 'self-actualization' needs at the bottom, and the more creative and intellectually oriented 'self-actualization' needs at the bottom, and the more creative and intellectually oriented 'self-actualization' needs at the bottom, and the more creative and intellectually oriented 'self-actualization' needs at the bottom, and the more creative at the bottom oriented 'self-actualization' needs at the bottom oriented 'self-actualization' needs at the bottom orien
The higher up the hierarchy, the more difficult it is to satisfy the needs associated with that stage, because of the interpersonal and environmental barriers that inevitably frustrate us. Higher needs become increasingly psychological and short-term, as in the lower survival-related needs. Our most basic need is
for physical survival, and this will be the first thing that motivates our behavior. Once that level up is what motivates us, and so on. The human body cannot function optimally if physiological needs are not satisfied. Maslow considered physiological needs the most important as all the other needs become secondary until these
needs are met. Once an individual's physiological needs are satisfied, the need for security and safety becomes salient. Safety needs can be fulfilled by the family and society (e.g., police, schools, business, and medical care). For example, emotional security, financial security, financial security (e.g., police, schools, business, and medical care).
stability, property, health, and well-being (e.g., safety against accidents and injury). After physiological and involves feelings of belongingness needs include friendship, intimacy, trust, acceptance, receiving and giving affection, and love. This need
is especially strong in childhood and can override the need for safety, as witnessed in children who cling to abusive parents. Maslow classified esteem needs into two categories: (i) esteem for oneself (dignity, achievement, mastery, independence) and (ii) the desire for reputation or respect from others (e.g., status, prestige). Esteem is the typical
human desire to be accepted and valued by others. People often engage in a profession or hobby to gain recognition, which gives them a sense of contribution or value. Low self-esteem or an inferiority complex may result from imbalances during this level in the hierarchy. Maslow indicated that the need for respect or reputation is most important for
children and adolescents and precedes real self-esteem or dignity. This level of need refers to what a person's full potential is and the realization of that potential. Maslow (1943, 1987, p. 64) describes this level as the desire to accomplish everything that one can, and "to become everything one is capable of becoming". Individuals may perceive or
focus on this need very specifically. For example, one individual may have a strong desire to become an ideal parent. In another, the desire may be expressed in paintings, pictures, or inventions. Although Maslow did not believe that many of us could achieve true self-actualization, he did believe that all of
us experience transitory moments (known as 'peak experiences') of self-actualization. Such moments, associated with personally significant events such as childbirth, sporting achievement and examination success), are difficult to achieve and maintain consistently. Maslow posited that human needs are arranged in a hierarchy: "It is quite true that
man lives by bread alone — when there is no bread. But what happens to man's desires when there is plenty of bread and when his belly is chronically filled? At once other (and "higher") needs emerge and these, rather than physiological hungers, dominate the organism. And when there is no bread and when his belly is chronically filled? At once other (and "higher") needs
emerge and so on. This is what we mean by saying that the basic human needs are organized into a hierarchy of relative prepotency" (Maslow, 1943, p. 375). Key Point: Keep in mind that Maslow's hierarchy of needs doesn't follow a strict linear progression. Individuals can feel various needs at the same time or shift between levels. Maslow continued
to refine his theory based on the concept of a hierarchy, Maslow (1987) proposed that the order in the hierarchy "is not nearly as rigid" (p. 68) as he may have implied in his earlier description. Maslow noted that the order of needs might be flexible
based on external circumstances or individual differences. For example, he notes that for some individuals, the need for creative fulfillment may supersed even the most basic needs. Maslow (1987) also pointed out that most behavior is multi-motivated and noted that "any
behavior tends to be determined by several or all of the basic needs simultaneously rather than by only one of them" (p. 71). Maslow (1954) proposed that human beings possess two sets of needs. This five-stage model can be divided into deficiency needs (D-needs), and
the top level is known as growth or being needs (Such as the need for food, sex, and sleep) and safety needs (such as the need for security and freedom from danger). Behaviors associated with these needs or security and safety needs (such as the need for security and freedom from danger).
a means to an end. Deficiency needs arise due to deprivation and are said to motivate people when they are unmet. Also, the motivation to fulfill such needs will become stronger the longer they are denied. For example, the longer a person goes without food, the more hungry they will become. Maslow (1943) initially stated that individuals must
satisfy lower-level deficit needs before progressing to meet higher-level growth needs. However, he later clarified that satisfaction of a need is not an "all-or-none" phenomenon, admitting that his earlier statements may have given "the false impression that a need must be satisfied 100 percent before the next need emerges" (1987, p. 69). When a
deficit need has been "more or less" satisfied, it will go away, and our activities become habitually directed toward meeting the next set of needs we have yet to satisfy. These then become stronger once engaged. Growth needs are more psychological
and are associated with realizing an individual's full potential and needing to 'self-actualize'. These needs are achieved more through intellectual and creative behaviors. Growth needs do not stem from a lack of something but rather from a lack 
the highest level, called self-actualization. Growth needs are achieved more through intellectual and creative behaviors. Every person is capable and has the desire to move up the hierarchy toward a level of self-actualization. Unfortunately, progress is often disrupted by a failure to meet lower-level needs. Life experiences, including divorce and the
loss of a job, may cause an individual to fluctuate between levels of the hierarchy. Therefore, not everyone will move through the hierarchy in a uni-directional manner but may move back and forth between the different types of needs. It is important to note that Maslow's (1943, 1954) five-stage model has been expanded to include cognitive and
aesthetic needs (Maslow, 1970a) and later transcendence needs (Maslow, 1970b). Changes to the original five-stage model are highlighted and include a seven-stage model are highlighted and highlighted and highlighted and highlighted and highlighted and highlighted and highlighted are highlighted and highlighted and hi
protection from elements, security, order, law, stability, freedom from fear. Love and belongingness needs - friendship, intimacy, trust, and acceptance, receiving and giving affection and love. Affiliating, being part of a group (family, friends, work). Esteem needs - which Maslow classified into two categories: (i) esteem for oneself (dignity,
achievement, mastery, independence) and (ii) the need to be accepted and valued by others (e.g., status, prestige). Cognitive needs drive our pursuit of knowledge and understanding. For instance, a student's desire to understand complex
mathematical theories, a traveler's curiosity about diverse cultures, or an individual's quest for life's deeper meanings all exemplify these needs. Meeting these needs facilitates personal growth, comprehension, and a deeper understanding of life and its complexities. Aesthetic needs - appreciation and search for beauty, balance, form, etc. Fulfilling
these needs leads to a deeper sense of satisfaction and harmony in life, as individuals seek environments and experiences that are pleasing and resonant with their sense of beauty. This involves the appreciation and pursuit of art, music, nature, and other forms of aesthetic expression. Fulfilling these needs isn't just about physical beauty but also the
emotional and psychological satisfaction derived from experiencing order and elegance. Self-actualization needs - A personal potential, self-fulfillment, seeking personal growth, and peak experiences. Transcendence needs - A person is motivated by values that transcend beyond the personal self. Beyond self-actualization, they represent the
human desire to connect with a higher reality, purpose, or the universe. This level emphasizes altruism, spiritual connection, and helping others achieve a deep sense of unity, understanding, and belonging within the vast expanse of existence.
Examples of transcendence needs include mystical experiences and certain experiences with nature, aesthetic experiences, service to others, the pursuit of science, religious faith, etc.). Self-Actualization Needs Instead of focusing on psychopathology and what goes wrong with people, Maslow (1943) formulated a more positive
account of human behavior which focused on what goes right. He was interested in human potential, and how we fulfill that potential. Psychologist Abraham Maslow (1943, 1954) stated that human motivation is based on people seeking fulfillment and change through personal growth. Self-actualized people are those who are fulfilled and doing all
they are capable of. The growth of self-actualization (Maslow, 1962) refers to the need for personal growth and discovery that is present throughout a person comes to find a meaning in life that is important to them. As each
individual is unique, the motivation for self-actualization leads people in different directions (Kenrick et al., 2010). For some people, self-actualization can be achieved through creating works of art or literature; for others, through sports, in the classroom, or within a corporate setting. Maslow (1962) believed self-actualization could be measured
through the concept of peak experiences. This occurs when a person experiences the world totally for what it is, and there are feelings of euphoria, joy, and wonder. It is important to note that self-actualization is a continual process of becoming rather than a perfect state one reaches of a "happy ever after" (Hoffman, 1988). Maslow offers the
following description of self-actualization: "It refers to the person's desire for self-fulfillment, namely, to the tendency for him to become actualized in what he is potentially. The specific form that these needs will take will of course vary greatly from person. In one individual it may take the form of the desire to be an ideal mother, in another
it may be expressed athletically, and in still another it may be expressed in painting pictures or in inventions" (Maslow, 1943, p. 382-383). Characteristics of Self-Actualized People Although we are all, theoretically, capable of self-actualizing, most of us will not do so, or only to a limited degree. Maslow (1970) estimated that only two percent of people
would reach the state of self-actualization. He was especially interested in the characteristics of people whom he considered to be self-actualized (including Abraham Lincoln and Albert Einstein), Maslow (1970) identified 15 characteristics of a self-actualized person
They perceive reality efficiently and can tolerate uncertainty; Accept themselves and others for what they are; Spontaneous in thought and action; Problem-centered (not self-centered); Unusual sense of humor; Able to look at life objectively; Highly creative; Resistant to enculturation, but not purposely unconventional; Concerned for the welfare of
humanity; Capable of deep appreciation of basic life-experience; Establish deep satisfying interpersonal relationships with a few people; Peak experiences; Need for privacy; Democratic attitudes; Strong moral/ethical standards. Experiencing life like a child, with full absorption and concentration; Trying new things instead of sticking to safe paths;
Listening to your own feelings in evaluating experiences instead of the voice of tradition, authority or the majority; Avoiding pretense ("game playing") and being honest; Being prepared to be unpopular if your views do not coincide with those of the majority; Taking responsibility and working hard; Trying to identify your defenses and having the
courage to give them up. The characteristics of self-actualization in their own unique way, they tend to share certain characteristics. However, self-actualization is a matter of degree, 'There are no perfect human beings' (Maslow,
1970a, p. 176). It is not necessary to display all 15 characteristics to become self-actualization with perfection. Self-actualization merely involves achieving one's potential. Thus, someone can be silly, wasteful, vain and impolite, and still self-actualize. Less
than two percent of the population achieve self-actualization. Applications & Examples Workplace organizations and employees. To enhance performance, the organizational culture and HR strategies must address and fulfill the needs of employees. HR
strategies, including compensation, benefits, job design, training, cultural development, and performance evaluations, can be tailored to cater to Maslow's hierarchy of needs (Jerome, 2013). 1. What can managers do to motivate employees with physiological needs? At the foundational physiological level, organizations should provide wages that
sustain a decent standard of living and comprehensive benefits, ensuring employees can comfortably cater to necessities such as food, shelter, and medical care. Offer comprehensive benefits - Quality health insurance, dental, vision, mental health coverage, and wellness programs demonstrate you care about employees' overall health and
ability to afford care. Subsidize gym memberships - Some companies offer monthly gym subsidies or onsite fitness centers to support physical health and stress management. Make the space ergonomic - Ensure workstations, chairs, keyboards, etc. are height adjustable and comfortable to work at for extended periods to prevent bodily strain or
injury. Pay for wellness services - Some companies offer perks like free annual flu shots, smoking cessation programs, or biometric screenings to proactively address health. 2. What can managers do to motivate employees with safety needs? For the safety tier, offering job stability, secure working conditions, and equitable compensation is essential
take risks, make mistakes, and speak up without fear of embarrassment or punishment. Define and reinforce ethical standards - Clearly establish and model expected conduct to prevent ethical lapses that undermine security. Promote transparency in pay and promotion practices - Clearly communicate compensation structure, advancement criteria
and salary negotiation options to build trust. 3. What can managers do to motivate employees with social needs involves cultivating an inclusive community within the organization. Team-building exercises, social gatherings, mentorship initiatives, and transparent communication can foster a sense of belonging. Motivation is
intervene or connect employees with help. Develop a mentorship program - Allow experienced employees to mentor newer ones to establish interpersonal bonds and a sense of support. Model inclusive language and behavior - Use words and actions that are welcoming and respectful to all groups. Share vulnerability and imperfections - Leaders
should open up on mistakes, challenges, and lessons learned to humanize the workplace. 4. What can managers do to motivate employees with esteem needs? To cater to esteem needs, organizations should implement recognition systems, merit-based promotions, and leadership roles. Leverage unique talents - Properly designated titles that reflect
an individual's role and status can also be beneficial. Make the most of performance reviews - Regular performance evaluations not only offer recognition but also highlight areas for growth, feeding into the employees' need for esteem. Thoroughly highlight strengths, progress made, and areas of influence. Entrust employees with mentoring roles
Having them share knowledge and coach others recognizes their expertise. What can managers do to motivate employees with self-actualization needs? For self-actualization, organizations should ensure that job roles align with employees with self-actualization needs? For self-actualization needs? For self-actualization needs? For self-actualization needs? For self-actualization needs?
environment that encourages innovation, organizations can facilitate their journey toward self-actualization. Foster innovation - Provide tuition reimbursement or subsidies for advanced courses and certificate programs. Offer paid time
for relevant reading, online courses, conferences, and seminars. Workplace Motivation A recent quantitative study by McConnell and Metz (2024) examined how different work arrangements (on-site, remote, hybrid) fulfill employees' needs. Surveying full-time U.S. employees, they found that those in hybrid work settings reported significantly higher
satisfaction of all five need levels, compared to employees working exclusively on-site or exclusively remotely The hybrid arrangement, which offers flexibility along with in-person collaboration, appears to satisfy basic needs (job security, comfort) while also supporting social connection and personal growth, more so than the other arrangements This
finding suggests that workplaces which balance remote flexibility with opportunities for face-to-face interaction can better motivate employees by addressing the full spectrum of human needs. The research by Ihensekien and Joel (2023) compares Maslow's hierarchy with Herzberg's two-factor theory, finding clear alignment between the frameworks.
Maslow's lower-level needs correspond to Herzberg's "hygiene" factors, while higher-level needs (recognition, growth opportunities) simultaneously to develop a motivated, high-performing
 workforce. Effective management requires recognizing employees' diverse needs and creating conditions that satisfy both fundamental necessities and growth needs, resulting in more engaged and productive employees. Nursing The hierarchy provides a framework for understanding patients as multifaceted human beings. Patient care should be
holistic, not just medical. Nurses must assess and address the spectrum of patient needs - physical, mental, emotional, and social (Jackson et al., 2014; Toney-Butler & Thayer, 2023). Doing so motivates greater engagement in care, faster healing, and improved outcomes. Physiological needs (ABC + D) - Ensure patients have adequate nutrition
hydration, pain control, sleep, and physical comfort. Address pain that hinders sleep and recovery. A - Airway: Ensure the patient has an open airway. B - Breathing: Assess and support adequate breathing and gas exchange. C - Circulation: Evaluate and maintain proper blood circulation. D - Decreased level of consciousness: Monitor for any change
in behavior or mental status. Safety needs - Maintain a clean, quiet environment with call bells for assistance. Prevent injuries through fall precautions to patients to relieve anxiety. Keep patient info confidential. Foster a climate of trust through
compassionate listening. Prevent medication errors. Belongingness - Loneliness impedes healing. Make patients feel welcomed and included. Introduce them to other patients. Allow for family visitation and spiritual practices. Esteem - Show respect through courteous communication and cultural sensitivity. Maintain dignity and privacy. Empower
patients in care decisions. Explain care in an easy-to-understand way. Listen attentively to their concerns. Make them feel valued. Self-actualization— Align care with patient values and aspirations. Perhaps share motivational stories of those with similar diagnoses who stayed active or provide resources on coping with grief over health changes
 Special Considerations Pain Management: While pain is typically considered a physiological need, its priority can vary. Acute, severe pain or pain indicating a life-threatening condition should be addressed immediately. Hospice Care: For end-of-life care patients, comfort and quality of life may take precedence over addressing physiological needs.
Education Maslow's (1962) hierarchy of needs theory has made a major contribution to teaching and classroom management in schools. Rather than reducing behavior to a response in the environment, Maslow (1970a) adopts a holistic approach to education and learning. Maslow examines an individual's complete physical, emotional, social, and
intellectual qualities and how they impact learning. Applying Maslow's hierarchy theory to the work of the classroom teacher is obvious. Before a student's cognitive needs can be met, they must first fulfill their basic physiological needs. For example, a tired and hungry student will find it difficult to focus on learning. Students need to feel emotionally
and physically safe and accepted within the classroom, and the teacher should create a supportive environment. Students must be shown that they are valued and respected in the classroom, and the teacher should create a supportive environment.
esteem is strengthened. Maslow's hierarchy provides a humanistic lens for teaching the whole child. Maslow (1971, p. 195) argued that a humanistic educational approach would develop people who are "stronger, healthier, and would take their own lives into their hands to a greater extent. With increased personal responsibility for one's personal
life, and with a rational set of values to guide one's choosing, people would begin to actively change the society in which they lived". Here are some ways a teacher can apply Maslow's hierarchy of needs in the classroom: Physiological - Ensure students have access to water, food, restroom breaks, and movement. Allow snacks, flexible seating, and
adequate breaks. Safety - Maintain an orderly classroom with clear expectations. Prevent bullying. Build trust through consistency and fairness. Allow students to make mistakes safely. Belongingness - Facilitate community and collaboration. Foster teamwork through group projects. Learn student names and backgrounds. Appreciate diversity
Esteem - Recognize student strengths and progress. Display student work. Empower leadership roles like line leader or tech helper. Praise efforts, not just achievement. Self-Actualization - Help students pursue interests creatively. Assign passion projects. Encourage goal-setting. Provide enrichment opportunities. Support challenging oneself. When
these foundational needs are met, students are more motivated to learn and perform well academically. But needs fluctuate. Be observant and nurture needs as they arise. Critical Evaluation Before exploring each critique in detail, here are the main concerns raised about Maslow's Hierarchy of Needs: Subjective Methodology: Maslow's biographical
analysis (based on a small, primarily Western sample) risks researcher bias and limited generalizability. Cultural Bias: Critics argue the hierarchy reflects Western, individualistic values and does not always apply uniformly across cultures. Lack of Empirical Rigor: Testing self-actualization and proving a strict stepwise sequence is challenging, making
parts of the theory more speculative than scientifically proven. Rigid Progression: Real-world examples show people often meet higher-order needs (like belonging or creativity) even when some basic needs remain unmet. Modern Pluralistic View of Motivation: Contemporary psychologists often see motivation as multidimensional—people can
experience and pursue several needs at once rather than progressing linearly from lower to higher needs. Mental Health Contexts: Research on homelessness, serious mental illness, and recovery suggests individuals continue striving for self-actualization or personal growth despite unmet basic needs, challenging the notion that one must fully satisfy
lower needs first. Overlooked Alternatives: Other models (e.g., Alderfer's ERG, Self-Determination Theory) suggest more flexible or universal principles of motivation of Maslow's theory concerns his methodology. Maslow formulated the
characteristics of self-actualized individuals by undertaking a qualitative method called biographical analysis. He looked at the biographics and writings of 18 people he identified as being self-actualized. From these sources, he developed a list of qualitative method called biographics and writings of 18 people he identified as being self-actualized. From these sources, he developed a list of qualitative method called biographics and writings of 18 people he identified as being self-actualized.
From a scientific perspective, there are numerous problems with this particular approach. First, it could be argued that biographical analysis as a method is extremely subjective as it is based entirely on the opinion of the researcher. Personal opinion is always prone to bias, which reduces the validity of any data obtained. Therefore Maslow's
operational definition of self-actualization must not be blindly accepted as scientific fact. 2. Biased Sample and Limited Generalizability Maslow's biographical analysis focused on a biased sample of self-actualization must not be blindly accepted as scientific fact. 2. Biased Sample and Limited Generalizability Maslow's biographical analysis focused on a biased sample of self-actualization must not be blindly accepted as scientific fact. 2. Biased Sample and Limited to highly educated white males (such as Thomas Jefferson, Abraham Lincoln, Albert Einstein, William
James, Aldous Huxley, and Beethoven). Although Maslow (1970) did study self-actualized females, such as Eleanor Roosevelt and Mother Teresa, they comprised a small proportion of his sample. This makes it difficult to generalize his theory to females and individuals from lower social classes or different ethnicity. Thus questioning the population
validity of Maslow's findings. Critics have often pointed out that Maslow's Hierarchy of Needs reflects Western, individualistic values. In many collectivist or non-Western cultures, community, spirituality, and family obligations may relegated to
higher tiers. Some cultures integrate spiritual fulfillment or communal welfare into their core survival needs, suggesting that people might see the entire group's well-being as inseparable from their own. In these settings, "belongingness" isn't just a step toward individual esteem—it's often woven into everyday life. Furthermore, it is extremely
difficult to empirically test Maslow's concept of self-actualization in a way that causal relationships can be established. It is often unclear where Maslow's scientific observations end and his inspirational or philosophical interpretations begin. Critics argue that his theory is more speculative than empirically proven, with a tendency to substitute
rhetoric for rigorous research. 4. Rigid Progression of Needs? Another criticism concerns Maslow's assumption that lower needs must be satisfied before a person can achieve self-actualization. Real-world observations show this is not always the case, leading some to claim parts of the hierarchy have been falsified. In cultures where many live in
poverty (e.g., India), people still exhibit higher-order needs (love, belongingness), contradicting Maslow's claim that one cannot focus on these needs without first securing basic physiological needs. Likewise, many historically creative individuals (Rembrandt, Van Gogh) lived in poverty yet arguably reached states resembling self-actualization. 5.
Modern Pluralistic View of Motivation Psychologists now conceptualize motivation as pluralistic, people can experience multiple needs simultaneously (Wahba & Bridwell, 1973). Contemporary research by Tay and Diener (2011) supports the idea that universal human needs do exist, but they do not necessarily follow Maslow's strict order. Tay and
Diener tested Maslow's theory by analyzing the data of 60,865 participants from 123 countries, representing every major region of the world. The survey was conducted from 2005 to 2010. Their large-scale study found that although basic needs (e.g., social
connections, respect) even when lower needs remain unfulfilled. Diener compares needs to "vitamins": we can experience well-being from multiple needs at once, even if some remain only partially satisfied. Respondents answered questions about six needs that closely resemble those in Maslow's model: basic needs (food, shelter); safety; social needs
(love, support); respect; mastery; and autonomy. They also rated their well-being across three discrete measures: life evaluation (a person's view of his or her life as a whole), positive feelings (day-to-day instances of joy or pleasure), and negative feelings (everyday experiences of sorrow, anger, or stress). The results of the study support the view that
universal human needs appear to exist regardless of cultural differences. However, the ordering of the most attention when you don"t need to fulfill them in order to get benefits [from the others]." Even when we are
hungry, for instance, we can be happy with our friends. "They"re like vitamins," Diener says about how the needs work independently. "We need them all." 6. Mental Health Contexts Maslow's hierarchy has proven valuable in mental health research and practice, offering insight into patient goals and system priorities. A 2015 mixed-methods study by
Derejko et al. applied Maslow's theory to homeless adults with serious mental illness entering housing programs. Quantitatively, the researchers found a counterintuitive result: individuals who still lacked basic necessities were often more likely to voice self-actualization goals (such as pursuing education or creative ambitions), rather than focusing
exclusively on securing food and shelter. Qualitative interviews revealed a complex interplay between basic and higher needs - many participants continued striving for meaning and personal growth even while some fundamental needs were unmet. These findings suggest that, in the context of extreme hardship, people do not always follow a strict
stepwise needs progression. The authors argue that recovery-oriented care should be highly person-centered, helping clients pursue higher goals alongside efforts to meet basic needs. In other words, mental health services should not assume that no self-improvement goals exist until housing and food are secured; often, the aspiration for purpose and
self-worth persists and can be harnessed as part of the recovery process. Zheng et al. (2016), using neuropsychological evidence, proposed a reordering of Maslow's hierarchy for mental disorders. They prioritize safety needs above physiological needs. This is because chronic insecurity is a key factor in anxiety, depression, and trauma-related
disorders. The brain's safety circuitry (amygdala and stress response) demonstrates how a lack of safety triggers severe distress. Essentially, they suggest "flipping" Maslow's bottom two layers, making safety (absence of violence, financial stability, health security) the primary need for mental well-being. This implies that mental health interventions
and social policies should prioritize establishing safety as a foundation for other interventions (healthcare, social support, therapy). 7. Alternate Motivation Theories Alderfer's ERG Theory ERG theory offers a more flexible and dynamic model, allowing for overlapping needs and acknowledging that people often navigate back and forth between needs
levels based on circumstances -something Maslow hinted at but never emphasized as strongly. Alderfer (1969) proposed three core categories of needs: Existence, Relatedness, and Growth (ERG): Existence Needs (R) - encompassing
interpersonal relationships and social connections (love, belonging). Growth Needs (G) - focusing on personal development and self-fulfillment (parallels self-actualization). How It Compares to Maslow: Simultaneous vs. Sequential: Unlike Maslow's largely sequential framework, ERG theory posits that individuals can pursue multiple levels of needs at
the same time. Frustration-Regression Hypothesis: If higher-level needs (Growth) are not met, people may refocus on lower-level (Existence or Relatedness) needs with renewed intensity, rather than simply stalling. Flexibility: Because ERG theory does not require that one need be "fully satisfied" before addressing another, it can accommodate
cultural and personal variations more readily. Herzberg's Two-Factor Theory herzberg's theory parallels Maslow's distinction between basic (deficiency) needs and growth (fulfillment) needs but emphasizes that satisfying lower needs only neutralizes dissatisfaction. True motivation emerges from meeting "higher" motivators. Hygiene Factors:
Elements like salary, job security, and working conditions, which, if missing, cause dissatisfaction but do not necessarily motivate people when present. Motivators (Satisfiers): Factors such as recognition, responsibility, and personal growth, which genuinely drive motivation and satisfaction when they are fulfilled. How It Compares to Maslows
Overlap with Lower vs. Higher Needs: Hygiene factors resemble Maslow's lower-level needs (physiological and safety), while motivators align with higher-level needs (esteem, self-actualization). Importance of Elimination of Dissatisfaction: Herzberg argues that removing negative conditions (e.g., poor work environment) does not automatically result
in motivation—workers need motivators for true engagement. Focus on Workplace: Herzberg's theory is often applied in organizational settings, whereas Maslow's model has broader applications, from education to personal development. Self-Determination Theory (Deci & Ryan) Deci and Ryan (1985) proposed that individuals have three fundamenta
psychological needs: Autonomy, Competence, and Relatedness: Autonomy: Feeling in control of one's actions and decisions. Competence and supported by others. SDT shifts attention from a layered progression to a holistic view of motivation,
suggesting that personal growth and well-being arise from the constant interplay of autonomy, competence, and relatedness—regardless of one's stage in a hierarchy. How It Compares to Maslow: Not Strictly Hierarchical: Deci and Ryan propose that humans continuously seek autonomy, competence, and relatedness; no single need must be fully
addressed before another becomes important. Intrinsic Motivation Focus: Self-Determination Theory (SDT) spotlights how internal drives (e.g., genuine interest, personal values) fuel learning, well-being, and performance, rather than prioritizing external factors like pay or status. Cross-Cultural Flexibility: SDT has been explored extensively across
different cultures, suggesting these three needs are universal and can be pursued simultaneously, an idea that overlaps with and expands Maslow's "growth" dimensions. Summary of Comparisons Hierarchy vs. Overlap: Maslow mainly argued a loose progression (lower to higher needs). Alderfer and SDT allow multiple needs to coexist, granting
greater flexibility. Herzberg splits conditions into hygiene factors (removing dissatisfaction) and motivators (driving satisfaction) and pursuing higher-level fulfillment. Alderfer's Growth and SDT's
Competence/Autonomy similarly emphasize advanced, self-directed pursuits. Cultural & Individual Variations: Alderfer and SDT more explicitly account for individual and cultural differences in the order or prominence of needs. Maslow acknowledged flexibility but still proposed a somewhat universal pattern. Conclusion Maslow's theory differs from
more purely physiological representations of human motivation is seen as being not just concerned with tension reduction and survival but also with human growth and development. While Maslow's work was indeed relatively informal and clinically descriptive, it did provide a rich source of ideas, and as such, a framework for
discussing the richness and complexity of human motivation that goes beyond homeostatic models and other biological models. McLeod, S. (2007, April 18). Maslow's hierarchy of needs. A better version of Maslow's pyramid diagram which is available for free download and print. Edit it to add your own style. This page presents a printable Maslow's Hierarchy of Needs Chart for free. This diagram will be useful
to people from all walks of life: Psychology students and teachers, philosophy students, thinkers, and all the introspective folks who feel the need to question everything about the universe. Overview of Maslow's Hierarchy of Needs Maslow's Hierarchy of Needs is a theory in psychology that Abraham Maslow proposed in his 1943 paper A Theory of
 Human Motivation, which he subsequently extended to include his observations of humans' innate curiosity. The concept for Maslow's hierarchy of needs work was based on Kurt Goldstein's organismic theory of personality ("The Organism" (1938)). Maslow's hierarchy of needs is often depicted as a pyramid composed of five levels: The most
fundamental and basic four layers of the pyramid are grouped together as deficiency needs associated with physiological needs, while the individual will feel anxious and tense. The individual won't strongly desire a higher level of needs
until the most basic level of needs are met. While deficiency needs must be met, growth needs are: 1. Self-actualization; 2. Esteem; 3. Love and Belonging; 4. Safety Needs (Safety and security, health and well-being, safety
net against accidents/illness and their adverse impacts); 5. Physiological Needs (breathing, food, water, homeostasis, sex, sleep). Edraw has made the vector versions of Maslow's Pyramid for your convenience. The diagram is a straight-forward version for free print and download, with high quality illustrations to represent each row of the pyramid.

for his Hierarchy of Needs. This is a diagram shaped like a pyramid, with "basic needs" at the bottom of the pyramid have not been yet, our motivation goes toward these basic needs. Once those needs are fulfilled, we focus on the needs at the top of the
pyramid. Maslow was one of the first psychology after psy
because we are already fulfilled. Let's review these needs, starting at the bottom of the pyramid. Maslow's Hierarchy of Needs is a psychological model that we use to understand the needs that help us physically
survive. It's hard to focus on anything else when you are starving or dehydrated, like in the example I mentioned at the beginning of this video. That's why these needs come first. Physiological needs are other basic needs: safety and security. Back in
more primitive days, this is why we formed tribes and small groups. Being part of these groups meant we were protected from predators, warring tribes, and shortages of physiological needs. This is where the "us vs. them" mentality started. These two sets of needs (physiological needs and safety) are considered our "basic needs." Without them, we
are likely anxious and concerned with nothing more than those needs. If you don't feel safe in your home, you are probably not too bothered with your place in society or greater purpose in the universe. You just want to feel safe in your home, beto good a tribe or a collection of people brought
you things like food, shelter, and safety. But we still form groups today. We still have an "us vs. them" mentality today. Why? Belonging to a group doesn't always fulfill our basic psychological needs anymore, but it does fulfill our basic psychological needs. Love and belonging are the third section of Maslow's hierarchy of needs and are the bottom level of
psychological needs. We want to feel loved and love other people. We want to feel like we belong to a group. Without these feelings of love and belonging, we become isolated. Social isolation and loneliness can seriously affect physical and
mental health. Who knew that joyous Thanksgiving dinners and lazy nights on the couch with your friends could be healthy? Being a part of a group, whether it's your family, a community organization, or a country, satisfies our inherent need for belonging and connection. Yet, within these affiliations, there's a deeper desire to be acknowledged and
valued for our individual contributions and capabilities. This yearning is encapsulated in the fourth level of Maslow's Hierarchy of Needs: esteem. Esteem needs are intricately tied to our self-worth and the manner in which others regard us. It goes beyond merely being a group member; it touches upon the recognition and appreciation we receive for
our unique contributions. Within community settings, satisfying esteem needs can manifest in various ways: Leadership Roles: Being entrusted with a leadership position, be it as a team captain, head of a community project, or a senior role in a workplace, often validates a person's abilities and acknowledges their significance within the group.
Accolades and Recognition: Awards or commendations, whether they are trophies for sports achievements, are tangible affirmation from peers, superiors
or family members can have a profound impact on bolstering an individual's self-esteem. A simple "Well done!" or "We're proud of you!" can go a long way. Responsibilities and Trust: When individuals are given responsibilities, it signals trust in their capabilities. For instance, being entrusted with key tasks in a community event or leading a crucial
project at work can deeply satisfy one's esteem. By recognizing and fulfilling these esteem needs, groups and communities foster individual growth and cultivate a more engaged, productive, and cohesive collective. This set of needs is at the top of the pyramid. Self-actualization, self-fulfillment, and self-transcendence are their own category of needs
This is where we aim to be the best person we can be. Once our other needs are fulfilled, we can focus on self-actualization. We can fulfill these needs by indulging in creative projects, setting big goals, or returning to school. In the broader landscape of psychology, the emergence of Humanistic psychology as the "third force" was significant. Before
its advent, the psychological arena was dominated by two prominent waves: psychoanalysis, rooted in the teachings of Sigmund Freud, emphasizing unconscious motives and the influence of the environment on those behaviors. Humanistic
psychology emerged in the mid-20th century as a response to these prevailing paradigms. While psychoanalysis often delves into the recesses of the unconscious mind and past traumas, and behaviorism focuses on external behavior of the unconscious mind and past traumas, and behavior of the unconscious mind and past traumas, and behavior of the unconscious mind and past traumas, and behavior of the unconscious mind and past traumas, and behavior of the unconscious mind and past traumas, and behavior of the unconscious mind and past traumas, and behavior of the unconscious mind and past traumas, and behavior of the unconscious mind and past traumas, and behavior of the unconscious mind and past traumas, and behavior of the unconscious mind and past traumas, and behavior of the unconscious mind and past traumas, and behavior of the unconscious mind and past traumas, and behavior of the unconscious mind and past traumas, and behavior of the unconscious mind and past traumas, and behavior of the unconscious mind and past traumas, and behavior of the unconscious mind and past traumas, and behavior of the unconscious mind and past traumas, and behavior of the unconscious mind and past traumas, and behavior of the unconscious mind and past traumas, and behavior of the unconscious mind and past traumas, and the unconscious mind and past traumas mind and
humans, the importance of self-actualization, and the free will to make choices. Its focus was not on the 'dysfunction' but on potential, highlighting the significance of personal growth and self-understanding. Abraham Maslow and Carl Rogers were pivotal figures in this movement. Their work shifted the spotlight to the individual's subjective
experience, providing a fresh lens through which human behavior, thoughts, and feelings could be understood. The emphasis on the individual's journey toward self-actualization, the apex of Maslow's pyramid, underscored the innate human drive towards self-fulfillment, creativity, and personal growth. The "third wave" had profound implications in
the realm of therapy. Traditional therapeutic methods, which often pathologized patients, began to be complemented by approaches that individuals were not merely products of their environment or prisoners of their unconscious desires but were architects of
their destinies, capable of introspection and personal growth. This paradigm shift in understanding human behavior and motivation emphasized humans' intrinsic potential and resilience. As Maslow's Hierarchy of Needs illustrates, there is a profound human urge to achieve fulfillment and purpose beyond mere survival. This humanistic approach
paved the way for various therapeutic practices and interventions integral to modern psychology. You already know that the answer varies daily, moment to moment. Let's say you're on a road trip to see your family for a reunion. You're excited to get to your destination but become very hungry along the way. Suddenly, you are all concerned with a reunion.
finding the nearest fast-food place, even if it means going out of your way. Once you've had dinner, it's back to business as usual. Why did your motivation change? Because you were hungry. We've all experienced something like this: your hunger, thirst, need to use the bathroom, or need to nap takes over everything else you had planned to do. Once
these are fulfilled, you can focus on fulfilling larger needs. A psychologist named Abraham Maslow took notice of this idea. In the 1940s, his ideas on motivation and mental health were revolutionary. He looked at how people could fulfill their needs to reach higher goals. Humanism helped many psychologists and therapists discover new ways of
understanding people's motivations and helping them reach their overall goals. Its impact began with concepts like the Hierarchy of Needs operates on the fundamental distinction between two types of needs. His model suggests that an individual's development depends on satisfying
these needs in sequence. These needs arise from a lack of a deficit and revolve around physiological, safety, belonging, and esteem categories. Maslow theorized that when these needs are unmet, an individual experiences tension, discomfort, or anxiety. Physiological Needs: These are our most basic requirements for survival, like food, water, and
shelter. A person feeling hunger or cold is motivated by a deficiency of food or warmth. Safety Needs: Individuals seek to create security environments once physical safety, finding stable employment, or acquiring health insurance are pursuits to overcome feelings of vulnerability. Belonging
Needs: Beyond the physical, humans have an intrinsic need to connect and belong. Joining clubs, forming friendships, or seeking companionship are ways to overcome feelings of loneliness and isolation. Esteem Needs: After feeling a sense of belonging, the need for esteem emerges. Being valued, respected, and recognized by peers or achieving
mastery in a skill are essential for one's self-worth. Fulfilling these deficiency needs are adequately met, individuals transition to growth
needs, focusing on personal growth, self-fulfillment, and achieving their highest potential. Self-Actualization: This is the pinnacle of the Hierarchy of Needs. Here, the motivation shifts from addressing deficiencies to pursuing personal growth, creativity, and self-realization. At this stage, individuals aim to become the best versions of themselves,
exploring their passions and talents and maximizing their capabilities. Thus, in Maslow's perspective, before individuals can fully engage in acts of creativity, altruism, or self-improvement (aspects of self-actualization), they must first ensure that their basic, deficiency-driven needs are securely met. This progression underscores the
interconnectedness and the hierarchical nature of human needs in his model. Maslow's hierarchy of needs is used in personal development courses, business seminars, and basic psychology classes. But this pyramid doesn't apply to adults wanting to grow and learn. Teachers can help their students learn more efficiently by understanding the impact
of deficiency needs. If a child lacks safety, a sense of belonging, or basic needs, they may not be able to learn as well as children's deficiency needs and compared it to their performance in school. They concluded they were less likely to excel if a child had
failed to fulfill their deficiency needs. What needs had the biggest impact? Health and dental care. If a child cannot satisfy the basic physiological needs in Maslow's Hierarchy of Needs, they may not be in the right headspace to learn and grow. Many argue that this is why children from lower-income households may fall short at school. It's not
because they're not smart. It's because their needs are not being met at home. Others argue that this is why school lunches should be free. By investing in children both in and out of school, we could help our children succeed and set all of us up for a better future. While Maslow's Hierarchy of Needs is a theoretical framework, it offers invaluable
insights into understanding human motivations and behaviors. Throughout history, countless examples have demonstrated the resilience of the human spirit, showing that individuals can indeed strive for growth even when confronted with unmet basic needs. Nevertheless, having an awareness of this hierarchy can be beneficial in various facets of
life: Self-awareness: By recognizing where you might be on this hierarchy, you can better understanding can guide personal development efforts and life choices. Empathy: In social and professional interactions, understanding that others might have unfulfilled deficiency needs can foster compassion,
patience, and effective communication. Leadership & Management: For those in leadership roles, recognizing the needs of lead members can lead to more effective management strategies, fostering environments where individuals feel safe, valued, and motivated to achieve. Personal Relationships: Recognizing the needs of loved ones, and
supporting them in their journey, can strengthen bonds and mutual understanding. Remember, while Maslow's model provides a structured understanding, human behavior is complex and multifaceted. It's not always about ticking boxes in a sequential order. Instead, use this framework to enhance self-awareness, improve interpersonal relationships
and optimize environments conducive to growth and fulfillment. Ultimately, the path to self-actualization is unique for every individual, influenced by personal experiences, aspirations, and circumstances., the free encyclopedia that anyone can edit. 117,922 active editors 6,998,799 articles in English An RATP Group electric Heuliez Bus shuttles
athletes from the Olympic Village. Transportation during the 2024 Summer Olympics and Paralympics constituted a major challenge for the event. Over €500 million was invested in improvements to transportation infrastructure for the games. A mobile app was developed to facilitate travel by offering a route
calculator, and 5,000 agents were deployed at stations and bus stops to assist travellers. A goal of Paris 2024 was to halve the average carbon footprint of the greenhouse gas emissions would be from the transport of athletes and spectators. All venues were
made accessible by public transport and bicycle, with 415 kilometres (258 mi) of cycle paths created to link the venues and 27,000 bicycle racks installed. Public transport was extended and services increased. The goal was met, with an estimated 54.6% reduction, representing 1.59 million tonnes of CO2 equivalent. (Full article...) Recently featured:

District Archive More featured lists The bluespotted ribbontail ray (Taeniura lymma) is a species of stingray in the family Dasyatidae. Found from the intertidal zone to a depth of 30 m (100 ft), this species is common throughout the tropical Indian and western Pacific Oceans in nearshore, coral reef-associated habitats. It is a fairly small ray, not
exceeding 35 cm (14 in) in width, with a mostly smooth, oval pectoral fin disc, large protruding eyes, and a relatively short and thick tail with a deep fin fold underneath. It can be easily identified by its striking color pattern of many electric blue spots on a yellowish background, with a pair of blue stripes on the tail. This bluespotted ribbontail ray was

 Wakanda Forever Lenny Kravitz Performer "Calling All Angels" during the annual "In Memoriam" tribute Jimmy Kimmel hosted the 95th Academy Awards. In September 2023, the Academy hired television producers Glenn Weiss and Ricky Kirshner to oversee production of the 2023 ceremony. [25] AMPAS president Janet Yang and CEO Bill Kramer
remarked that they looked "to deliver an exciting and energized show" with Weiss and Kirshner. [26] Two months later, comedian and talk show host Jimmy Kimmel was announced as host of the gala. "Being invited to host the Oscars for a third time is either a great honor or a trap," Kimmel stated in a press release regarding his selection. "Either
way, I am grateful to the Academy for asking me so quickly after everyone good said no", he concluded.[27] Furthermore, AMPAS announced that all 23 categories would be presented live during the previous year's decision to present
eight below-the-line categories prior to the live portion of last year's gala.[28] In light of the Chris Rock-Will Smith slapping incident during the previous year's telecast, AMPAS announced that the organization hired a "crisis team" in the event a similar altercation or if an unexpected fiasco arose.[29] In an interview published by Time magazine,
Kramer explained: "We have a whole crisis team, something we've never had before, and many plans in place. We've run many scenarios. So it is our hope that we will be prepared for anything that we may not anticipate right now but that we're planning for just in case it does happen."[30] The Dolby Theatre stage on the day of the ceremony Several
others participated in the production of the ceremony and related events. Rickey Minor served as musical director for the ceremony.[31] Production designers Misty Buckley and Alana Billingsley, who were the first women-led design team for an Oscars telecast, designed a new stage for the show.[32] According to Buckley and Billingsley, the stage
 was designed to resemble Art Deco movie places from the Golden Age of Hollywood. [33] Additionally, the set utilized several LED panels that were used to display the category names, winners' names, or images from the nominated films. [34] Notably, the arrivals area along Hollywood Boulevard outside the Dolby Theatre was lined with a champagne-
colored carpet, marking the first time since the 32nd ceremony in 1960 that a non-red colored carpet was utilized for the gala. According to red carpet consultant Lisa Love, the production team chose a lighter shade of carpet color in order to not clash with a sienna-colored tent erected to shield attendees from the sun or potential rain. She also
 added that the shades of color for both the carpet and tent were inspired by "watching the sunset on a white-sand beach at the 'golden hour' with a glass of champagne in hand, evoking calm and peacefulness".[35] Lady Gaga was initially not scheduled to perform her nominated song "Hold My Hand" from Top Gun: Maverick due to prior commitments
 involving her role in Joker: Folie à Deux. On the morning of the ceremony, however, it was reported that Gaga would perform at the ceremony. [36] Meanwhile, actress Glenn Close, who was originally scheduled as a presenter during the gala, canceled her appearance due to a positive COVID-19 test. [37] When the nominations were announced, nine of
the ten films nominated for Best Picture had earned a combined gross of $1.57 billion at the American and Canadian box offices at the time. Top Gun: Maverick was the highest-grossing film among the Best Picture nominees with $598.4 million; this was
followed by Elvis ($151 million), The Fabelmans ($1.5 million), The Banshees of Inisherin ($9 million), The Banshees of Inisherin ($9 million), The Banshees of Inisherin ($1.1 million), The Banshees
policy of refusing to release such figures.[39] Furthermore, by virtue of Avatar: The Way of Water and Top Gun: Maverick's Best Picture nominations, it marked the first time since the 55th ceremony in 1983 that the two highest grossing films of the year were both nominated in the aforementioned category.[40] Andrea Riseborough's Best Actress
nomination for To Leslie was controversial amongst critics and pundits, as Momentum Pictures, the film's distributor, did not fund a conventional advertising-driven awards campaign for the film. Instead, director Michael Morris and his wife, actress Mary McCormack, organized a "celeb-backed campaign" to get Riseborough nominated.[41][42] They
contacted friends and colleagues in the entertainment industry, asking them to view the film and share it with others if they enjoyed it.[43] Morris and Riseborough's profile; dozens of celebrities praised her performance
 on social media, and some hosted screenings of the film during voting for the Academy Award nominations in January 2023. [44] Riseborough's nominations in Oscar history. [43] After her nomination was announced, speculation arose that the
tactics might have violated AMPAS rules against directly lobbying voters. [46] A post on the film's Instagram account was noted by several AMPAS members for possibly violating a rule prohibiting "[singling] out 'the competition' by name" by featuring a quote from film critic Richard Roeper, who praised Riseborough's performance as better than Cate
Blanchett's in Tár, a fellow nominee for Best Actress.[47] On January 27, the Academy announced a review of the year's campaigns "to ensure that no guidelines may be needed in a new era of social media and digital communication".[48] The Academy has rescinded nominations for
nominees who participated in unsanctioned campaigning. However, there were no reports that Riseborough had been involved in such, or that any Academy members had lodged formal complaints about the campaigning to address "social media and outreach campaigning had been involved in such, or that any Academy members had lodged formal complaints about the campaigning had been involved in such, or that any Academy members had lodged formal complaints about the campaigning had been involved in such, or that any Academy members had lodged formal complaints about the campaigning had been involved in such, or that any Academy members had lodged formal complaints about the campaigning had been involved in such, or that any Academy members had lodged formal complaints about the campaigning had been involved in such, or that any Academy members had lodged formal complaints about the campaigning had been involved in such, or that any Academy members had lodged formal complaints about the campaigning had been involved in such as a such
tactics" which they said caused "concern", but confirming that Riseborough's nomination would be retained. [49] Following the controversy, the Academy introduced new campaigning rules and clarifications in May 2023. [50] Variety columnist Owen Gleiberman wrote: "It didn't rock the boat, it didn't overstay its welcome, and it left you feeling that
the world's preeminent awards show, all doom-saying punditry to the contrary, is still, on balance, a very good thing." He also added that the wins received by Everything Everywhere All at Once "lent the evening a rare emotional unity".[51] Television critic Daniel Fienberg of The Hollywood Reporter similarly praised the show's emotional beats and
found its flaws "were mitigated more gracefully than just about any Oscars telecast" he could recall.[52] Mick LaSalle of the San Francisco Chronicle commended Kimmel's stint as host stating: "He was establishing that 2023 would not be a repeat of 2022 — and it wasn't. It was such a relief to see something, anything, actually get better." [53] Mike
Hale of The New York Times remarked on "the ordinariness and sameness of the ABC broadcast" compared to the prior year, [54] while USA Today's Kelly Lawler criticized it as "terribly fake" and felt that Kimmel's role "felt phoned in, or at least maybe monitored by corporate overlords looking to avoid controversy" despite some of his jokes tackling
controversial subjects such as the January 6 United States Capitol attack and Tom Cruise's Scientology advocacy.[55] Hale added that "the modern Oscars have become something more to be endured than enjoyed".[54] The American telecast on ABC drew in an average of 18.75 million people over its length, which was a 13% increase from the
previous year's ceremony and marked the first time that the Academy Awards experienced consecutive years of viewership increase since the 86th Academy Awards in 2014.[3] The show also earned higher Nielsen ratings compared to the previous ceremony with 9.9% of households watching the ceremony.[56] In addition, it garnered a higher 18-49
demo rating with a 4.03 rating among viewers in that demographic. [57] It was the most-watched prime time entertainment broadcast of 2023 in the United States. [58] In July 2023, the broadcast was nominated for three awards at the 75th Primetime Creative Arts Emmys but failed to win in any of the categories for which it was nominated.
