You may have a higher risk for MS if you have a close relative with MS. There is no single test for MS above. If it spreads often, it can relieve stiffness and help you move better. Management. The therapist can create an exercise program for you, or teach you how to use tools to help you move better, such as canes, scooters, crutches, or wheelchairs. If you need help getting dressed, do things around the house or complete chores. At work, the doctor will probably send you to occupational therapy (OT). Your doctor will know if a drug is right for you according to your symptoms. If you sometimes can't control the need to urinate or cry, hydrobromide dextromethorphan (Nuedaxta) can help. Other medications treat sexual problems or problems with bladder or bowel control. PAIN AND VISION PROBLEMS THE EYES: First, often causes eye pain, blurred vision³ and even vision loss³. It can help your body to make more steroid hormones. Other medicines can treat symptoms that only affect some people with MS. If you have a severe relapse, your doctor may prescribe corticosteroids. For example: If you have vertigo or dizziness due to your MS, your doctor may prescribe MECLIZINE (AntiVert). If MS causes pain, your doctor may give you medicines such as: amitriptyline (elavil) carbamazepine (Tegretol) clonazepam (Klonopin) duloxetine (Cymbalta) gabapentin (Neurontin) NORTRIPTYLINE (AVENTIL, PAMELOR) Phenytoin (Dilantin) Pregabalin (Lyrica). If you have trouble walking, the doctor will probably prescribe Dalfampridine (Ampyra). If you have spastic muscles, which can cause pain, muscle tightness, or problems for anidinazit anidinazit xotoB(A nixot munilutobanO) muilaV(mapezaiD) muirtnaD(onelortnaD) niponolK(mapezanolC) LASEROiL ,nefolbaG(onefolcab :sotse ed onu raborp aRdop ocid©Am le For tremors, clonazepam or isoniazid (Laniazid, Nydrazid) may help. To relieve fatigue caused by MS, your doctor may prescribe amantadine, fluoxetine (Prozac), or modafinil (Provigil). If you are depressed, your doctor may prescribe one of several antidepressants. No two people have the same problems, so your doctors will develop a treatment plan for you, whether the disease affects your mind, body, emotions or any combination of the three. Many people with MS take medicines to change the course of the disease. See if your doctor thinks it's right for you. You may also have incontinence (problems controlling your bladder). Am I at risk for MS? Photo courtesy: [eclipse_images/iStock](#) Experts don't know exactly what causes MS. You may also hear them called steroids. Some people notice changes in their bowel movements, such as constipation or diarrhea. They can limit the number of relapses you have and delay the progression of any problem. You will receive some with an injection, such as: Glatiramer acetate (Copaxone) Interferon beta-1a (Avonex, Rebif) Interferon beta-1b (Betaseron, Extavia) Ofatumumab (Kesimpta) Peginterferon beta-1a (Plegridy) Others come in tablets: Cladribine (Mavenclad) dimethyl fumarate (Tecfidera) diroxymel fumarate (Vumerity) fingolimod (Gilenya) ozanimod (Zeposia) monomethyl fumarate (Bafertam) Siponimod (Mayzent) Teriflunomide (Aubagio) Other are obtained through an intravenous infusion, such as: Alemtuzumab (Lemtrada) Mitoxantrone (Novantrone) Natalizumab (Tysabri) Ocrelizumab (Ocrevus). You and your doctor will determine which medicine is right for you. Your doctor will probably order an MRI to look for changes in your brain and nervous system. Some common early symptoms of MS include: Fatigue (feeling very tired all the time). It can be a sign of many health conditions. Regular activity can help you feel less tired, improve your at least state and help with bladder performance and bowel. Some MAs suggest acupuncture for people with SRA. They are strong medicines that can shorten your relapse. Gifted medically by Brunilda Nazario, November 13, 2021. Symptoms of multiple sclerosis (MS) can affect different parts of your body and brain. But it's likely caused by a combination of genes and environmental factors. You will learn how to conserve energy and find tools that can make everyday tasks easier. It can also help you talk about your feelings with friends and family. Doctors are not sure if some symptoms of MS get worse, but if it relieves the stress in your life, it may relieve your symptoms. It causes your immune system to attack the protective sheath around your nerves (called the myelin sheath), and this causes nerve damage. MS can cause a range of fatigue symptoms to loss of vision for problems for problems. Together, you and your doctor can find out what is causing your symptoms and find the right treatment for you. Links from TheReSource: more from [SAntomfind.com](#) Your doctor will analyze a combination of factors and rule out other conditions to make the diagnosis. Tingling or numbness in your extremities: As the nerves in the spine lose their myelin sheaths, you may feel tingling and numbness in your arms, fingers, and legs. You can get a high-dose medication through an IV, such as methylprednisolone (Solu-MEDROL), or a high-dose pill, such as prednisone (Deltasone). This traditional Chinese technique involves a specialist who puts thin needles into stitches on your body to help the flow of energy. Most people have their first symptoms between the ages of 20 and 40, but symptoms can start at any age. Ask your doctor which ones are right for you. Your doctor will probably suggest one of several types of therapy that may not be effective. Some common treatments for MS include: Physical therapy, Occupational therapy, Speech therapy, Cognitive therapy, and Psychosocial support. Other treatments include: Emotional support, Acupuncture, and Alternative medicine. If you have problems with speech or it is difficult to swallow liquids or food, it may be helpful to meet with a speech and language pathologist. Other treatments include: Emotional support, Acupuncture, and Alternative medicine. If you feel depressed or have other mood swings, it may be time to consult a mental health professional. Some medicines slow the progress of MS in the brain and spinal cord. And the early symptoms of MS are similar to the signs of other health conditions. Or you could try the corticotropin repository (H.P. Acthar). But most people feel an increase in fatigue before being diagnosed with multiple sclerosis. Changes in bowel movements: Multiple sclerosis affects the supply of nerves to the intestines and bladder. © 2022 WebMD, LLC. Get more information about the first symptoms of multiple sclerosis and how to get a diagnosis. Photo courtesy: [sparks/iStock](#) Multiple sclerosis affects everyone differently, so the symptoms can be difficult to detect. Stress affects people in different ways. They can also do a lumbar puncture to collect spinal fluid. Higher levels of certain proteins in your spinal fluid may be a sign of MS. Photo courtesy: [Zinkevych/iStock](#) You may need to see a MS specialist or a neurologist (brain and nervous system specialist). View Privacy Policy and Trusted Information Medically reviewed by Carolin Schneider, MD. Photo courtesy: [FatCamera/iStock](#) Multiple sclerosis (MS) is a progressive autoimmune disease that affects more than two million people worldwide.
