Brick breaker game java project report

Here we are providing list of projects with code and documents, Final year projects download. We want to make an interactive game based upon the classic game brick breaker. The object of brick breaker is to break the bricks that are distributed around the top of the game screen. The bricks get broken after coming in contact with a ball that bounces around the screen. At the bottom is a paddle that in the classic game moves based on user input. The user has to make sure the ball bounces off the paddle without going off the bottom of the screen. Description In our implementation, we want to make the paddle be based upon the position of an actual Ping-Pong paddle held by the user. A camera will track the position of the paddle as the user moves the paddle. The brick breaker game allows a great opportunity for improvements with power-ups, special bricks, and audio feedback. Download Brick game c++ project Source code download 1. Download the following asset for the game Download --. Asset These files will be used in the game. public static void main(String[] args) add these two lines after the first import line in MapGenerator classimport java.awt.Color;import java.awt.Graphics2D; This comment has been removed by the author. for (int i = 0; i < map.length; i++) { for(int j = 0;j < map[0].length; j++){ map[i][j] = 1; Block Breaker 3 latest version: This video is unavailable.
