Read more: Affiliate disclosureSYM scooters are not common in the United States, so it may not be a brand youve ever heard of before you started shopping for a scooter. Before getting a SYM scooter, Ive done a deep dive to help you feel better about spending your money buying from a company you may not be familiar with.SYM, which is short for Sanyang Motor Co., Ltd. While not common in the US, this brand has been producing scooters for almost 60 years elsewhere around the world.SYM scooters are well-known for producing good, quality scooters backed by a 24 month warranty supported through a dealer network.Although the brand might not be as popular as Vespa is in the US, it is a reliable brand. SYM ranks among the top ten in the scooter market (even in the US) and has produced over a 13 million two-wheeled vehicles in 2018 alone across 90 countries!Taiwan has a lot of scooter manufacturers in Taiwan, but SYM is the first two-wheeled brand that started producing scooters in Taiwan.I trust a scooter brand with a good warranty, and SYM scooters have a 24 month warranty with unlimited miles to protect scooter buyers from manufacturing defects. Your risk is light! Just ride that scooter as much as you can more miles = more likelihood of issues if youre going to have any.AND THEY ARE SO MUCH FUN!2019 SYM Fiddle iii at a dealershipNo, SYM scooters are produced by SYM, not Honda. SYM is the sole international enterprise that manufactures both motorcycles and automobiles in Taiwan.Many people might assume that Honda makes SYM scooters; however, that is not true. Most people assume that Honda produces SYM scooters because SYM had a joint venture with Honda in 1962 to start a local assembly of motorcycles.Although SYM has had a corporate partnership with Honda since 1962, SYM scooters are not produced by Honda.SYM manufactures and sells its scooters under the brand name SYM, but they manufacture automobiles components in partnership with Hyundais brand name. This means that SYM scooters are also NOT made by Hyundai.SYM is a Taiwanese brand. SYM headquarters are in Hukou, Hsinchu County, Taiwan with manufacturing in Taiwan, Vietnam and China.Most Americans ask this question because they have heard that Chinese brands like Tao Tao have a less reliable reputation. This question bugs me as there are lots of products that we love manufactured all over the world including China.The company has processes and quality checks that make SYM scooters a solid product.SYM scooters have a reputation for producing quality scooters. They are reliable and have a 24-month warranty.The scooters produced by this brand are sturdy and well-built. The performance, braking system, and handling are all top-notch. The scooters are well-priced, and they give their moneys worth. They are reliable, and they hold their value as well as other used scooters at a similar price point.There have been several reviews from people who own and ride SYM scooters that they are reliable and do not give the owners issues.Currently, SYM has three major production facilities located in Taiwan, China, and Vietnam.They also have subsidiaries in Italy and Germany.Although they have these major manufacturing facilities in a handful of countries, you can find SYM scooters for sale in over 90 countries globally.SYM was the first manufacturer in Taiwan to produce motor scooters.2020 SYM CityCom 300i at a dealershipMost popular and reputable scooter brands sell their scooters traditionally through a dealer network where you can buy your scooter in the same way that a traditional automobile is sold.Even when you buy the scooter online, you will still need to go through a dealer to complete the transaction and go home with your scooter.SYM scooters are also sold through a dealer network.Here is a link to the SYM dealer network, but know that there is a perk to working with a dealer. SYM scooters have a 24-month warranty serviced through that dealer network. So you will feel better with knowing you have some protection through that warranty.The warranty does not have a limit on the number of miles you might have traveled with the scooter, so get riding!Its clear that SYM is an acronym for something, but I had no idea what it might be initially!SYM is an abbreviation for for SanYang Motor Company, Limited.The company manufactures mopeds, scooters, bikes, and cubs.SYM scooters are not cheap.When I say SYM scooters are not cheap, I assume that you are talking about low-quality scooters. SYM is a good scooter that gives value and great features for the price at which it is sold.However, as far as cheap is concerned, other scooters are definitely cheaper.SYM makes a large variety of scooters worldwide, and they are known in the US as SYM USA.However, in the United States, there is a limited collection to choose from. This does not only pertain to SYM but all other scooter brands. This might be because scooters are not as popular in the US as in other countries.Thankfully scooters are rising in popularity here, and the number of SYM scooters on the road is, too.Here is a list of SYM scooter collections that are available in the United States:Citycom S 300iJet 14 200i (introduced in 2022 here)Fiddle 4 200iMio 50These scooters, however, come in several colors from which you can pick.While limited, I do love that the engine sizes are on the higher side. A lot of US offered scooters are in the 50cc range which limits you to ~30 miles per hour (mph). The 200i scooters really have an engine size of close to 170cc which gives you a top speed of around 65 mph. Thats a lot of flexibility in what you can use your scooter for while still being small enough to be agile & quite nimble.Read here so that you know what sized scooter is right for you! dont want you to waste your money!SYM scooters in the US are not expensive compared to brands such as Vespa or Honda. They offer value for the price as the scooters have a sturdy build, reliable engine, and a great feature set at the price point.Mio 50: engine displacement 49cc \$2,500Citycom S 300i: engine displacement 278cc, \$6,000Fiddle 4 200i: engine displacement 169cc, \$3,900Jet 14 200i: engine displacement 169cc, \$3,900These prices are simply manufacturer suggestions, but for the most part, scooter dealers dont deviate much from that number. However, your state fees and a few dealer add-ons can make that number much higher.Watch this video for that surprised cost conversationsYou might find it difficult to get SYM parts if you are trying to get them independently. However, your SYM scooter dealer will have the best inside knowledge about the availability of SYM scooter parts and accessories.I also go to Capri Moto, Scooter Works to check availability if it is something I want to try for without picking up the phone first. On our secure, future-proof infrastructure, you can grow from prototype to planet-scale without having to think about capacity, reliability, or performance.Revisit the world around you in ways you've never seen beforeIf a map is no longer just a map, what is it? Its a trip to the moon, a ticket to Mars, a bird's eye view of the Earth. You can see everything from the highest peak to the lowest canyon.Travel smoothly, bid farewell to congestionLead the way as a professional guide. Google Maps dynamically plans new routes based on real-time traffic information, even helping you choose the most desirable lanes.Listen to what others sayTorn between two businesses? You can start by looking at comments and photos shared by locals to make a more informed decision. Or even better, join a local guide program to share your favorite stores.Embrace the wonderful world around youThe wonderful world is all around you, waiting for you to discover. Looking for a place to eat? It's all in Google Maps: browse nearby restaurants, find one you like, check out the dining environment, and even make reservations.Adjust the route in real timeGoogle Maps will dynamically plan new routes based on the latest traffic conditions to help you avoid congested roads. About UsContact UsPrivacy PolicyDMCATerms of ServicesScholarship 2025Siteupdate Check all the breather hoses to the carb for kinks/splits,amazing how little things like this can stop them going!Just had this problem with a wk gtr300 chinese thing i bought with 18 miles on it,what a pile of poop!Anyway,thoroughly check all carb/vent hoses. I'm sure you know but the coils are driven using low side MOSFETs...so ecu pulls them down, current builds up in primary coil...quickly let them go open by turning off mosfet and you get a flyback voltage at the secondary. If you can see the low going drives on the primary but no spark suggests the current build up isn't happening. Suppose the 12v feed to the coil was high resistance...I think this would do what you are seeing. Something to check. Scooter Shack Scooter Forum Forums > Main Scooter Topics > The Workshop > Sym Scooterswas founded in 1961 and is headquartered in Japan.Buying a motor scooter for the first time in your life can be a difficult experience.For more info about Sym scooters,visit their site. SYMFiddle III SYMSymply II Find a local SYM scooter dealer. My advice after many years of working on vehicles -replace all seals that you disturb .Most only cost a few pence .Proved right when I (in desperation) took little furby to a fast fit place for an oil change (as I couldn't get time to o it myself & with work I'd been putting way of firm ,manager said he'd do it for lowest price quoted)-filter delivered did not include top seal -so nice pool of oil when started . I have checked for power at the terminals and could not get a reading, then it used a battery to test the fuel pump and nothing, I'm assuming that it should have done something. The terminals are badly corroded so will clean up and have another try. Reddit and its partners use cookies and similar technologies to provide you with a better experience. Scooter Shack Scooter Forum Forums > Main Scooter Topics > The Workshop > Causes for the problem of a Sym not starting are various. First, the battery may be dead, which is a common problem. Second, there may be a problem with the spark plug. It is crucial to check it regularly and replace it if necessary. In addition, clogged fuel lines or problems with the carburetor can cause the Sym not to start. Sym jet 50 will not startSpecific problems can occur with the Sym Jet 50. For example, the starter motor may be defective. Furthermore, there may be a dirty carburetor, especially if the scooter has been stationary for a long time. Solution: have the starter motor checked and, if necessary, clean the carburetor.Scooter sym mio does not startIn addition to common causes, contamination in the fuel system can cause starting problems in the Sym Mio. Solution: perform a thorough cleaning of the fuel system.Sym mio electric start does not workOn the Sym Mio, it is possible that the electric start may not work. Possible causes are a faulty starter relay or problems with the wiring. Solution: check the starting relay and wiring. Replace damaged parts.Sym orbit 2 will not startThe Sym Orbit 2, like other models, suffers from possible starting problems. A faulty ignition or problems with the electronics may be the culprits. SOLUTION: Inspect the ignition and consider diagnosing the electronics.Sym fiddle 2 will not startFor the Sym Fiddle 2, in addition to general starting problems, poor gasoline supply or clogged air filter may be the cause. Solution: check the gasoline supply and air filter Sym allo will not startThe Sym Allo may suffer from fuel system problems. A dirty fuel filter or clogged nozzles are common causes. Solution: clean or replace the fuel filter and check the nozzles.Where can I service my scooter?You can get your scooter serviced at various garages and scooter stores. It is wise to look for a reliable and experienced mechanic who specializes in scooter maintenance. You can also use Scooter-Onderhoud.nl. This is the No. 1 place in the Netherlands for a good and fast maintenance of your scooter without unexpected high costs. Does your scooter need maintenance and do you want to prevent damage? Make an appointment right away!Same day appointment scheduled An upfront cost estimate Always friendly service Could well be the fob battery. Flashing an LED doesn't take a lot of power but transmitting a signal strong enough for the car to sense does.
