PROPERTIES OF QUADRILATERALS

#13

Polymers with four sides are called QUADRILATERALS. There are various properties associated with specific kinds of quadrilaterals. The names of quadrilaterals related in the book are listed below along with their properties.

Quadrilateral ABCD is a **parallelogram**. Opposite sides are parallel and congruent. Consecutive angles are supplementary. The diagonals bisect.

Quadrilateral EFGH is a **rhombus**. It is a parallelogram with four congruent sides. In addition to all the properties of a parallelogram, the diagonals are perpendicular and bisect the opposite angles.

Quadrilateral TQRS is a **rectangle**. It is a parallelogram with four right angles. In addition to all the properties of a parallelogram, the diagonals are congruent.

If a rectangle is also a rhombus, then it is called a **square**. A square would have all the properties listed previously.

Parallelogram

F		Name: Opposite sides equal Opposite sides parallel 4 right angles
D		Name: All sides equal Opposite sides parallel Diagonals cross at right angles No right angles
C		Name: All sides equal Opposite sides parallel 4 right angles Diagonals cross at right angles
A		Name: 2 pairs of equal sides Diagonals cross at right angles
G		Name: 1 pair of parallel lines
H		Name: 2 pairs of parallel sides No right angles

Parallelograms Quiz

SOLUTIONS

mathplace.com

I. List 5 properties of parallelograms.

1) Opposite sides are parallel
2) Opposite sides are congruent
3) Opposite angles are congruent
4) Consecutive angles are supplementary
5) Diagonals bisect each other

II. For parallelogram ABCD, answer and explain why:

1) $\overline{AB} \cong \overline{DC}$ opposite sides are congruent
2) $\overline{DM} \cong \overline{BM}$ diagonals bisect each other
3) $\angle AMD \cong \angle BMC$ vertical angles congruent
4) $\angle BCD \cong \angle BAD$ opposite angles congruent
5) $180^\circ = m\angle BAD = m\angle ABC$ OR $\angle ADC$ consecutive angles are supplementary
6) $2\overline{AM} = \overline{AC}$ diagonals bisect each other...

III. Solve:
(Assume each quadrilateral is a parallelogram)

Find x and y:

$9x + y = 12$
 $4x - 2y = 20$
use combination method

$18x + 2y = 24$
 $4x - 2y = 20$
 $22x = 44$
 $x = 2$

If $x = 2$, then $y = -6$

Find: $\angle UDA$ 30 degrees
 $\angle UQD$ 107 degrees
(because alternate interior angles are congruent)
(because QUA is 73 degrees, and consecutive angles are supplementary)

since $x = 3$, the lengths are 9 and 9.... LR = 18

Find the length of LR: 42 - 11x
since diagonal is bisected, the segments are congruent:
 $x^2 = 42 - 11x$
 $x^2 + 11x - 42 = 0$
 $(x + 14)(x - 3) = 0$
 $x = -14$ or 3
or, if $x = -14$, lengths are 196 and 196.... LR = 392
