Mastering Player Unknowns Battlegrounds Mobile (PUBGM), involves a lot of skills and adjusting the sensitivity settings, to what fits best for your smooth Gameplay. Here is a sample of sensitivity, which you can adjust as per your requirement, this is a sample for zero recoils. This is not only Sensitivity Settings for all guns. Is Sensitivity Settings is required in PUBGM? Mainly for recoil control, and for smooth gameplay, you need to have Sensitivity Settings. In today's PUBG mobile scenario, Sensitivity Settings are the important thing to get the best Chicken Dinner. Perfect settings will make your gameplay smooth, Proper graphics settings will not give laginess, and a perfect sensitivity setting will help you to control the gun's recoil easily. Checkout:- Gaming PC build under 85000 [FULL SET UP] 1080p gaming in 2021 General Settings in PUBG Mobile Basic settings:- In this part, you will have the primary settings of the game like "Aim Assist, Firing modes, peek & fire, gyroscope", and other kinds of stuff. You can adjust and change those settings according to your choice. Graphics Setting:- Graphics settings are a must and the most important settings of the game. Graphics settings are used for smooth gameplay. Adjust the Picture Quality, Frame Rate or FPS (Frame per second), Texture style, and In-game brightness. On a budget Mobile Phone, you will get an FPS of Medium. The Frame rate plays the main role in close-range gunfights. Getting a Higher frame rate means a smoother screen while playing. Frame rate should be Extreme level, many smartphones do not support the Extreme level. In this case, you can use the High or Ultra mode. The graphic style also plays a main part in rendering textures like houses, buildings, trees, it helps the player to spot an enemy. The ideal graphics mode should be Classic / Colorful. If you have a Mid-end device then this is the best setting for a lag-free and smooth experience. Vehicle Settings In this part, you can adjust the vehicle operating controls, left and right car joystick options. stick with default setting in this part. Best Sensitivity Settings For PUBG Mobile These Settings will help to control recoil. Camera Sensitivity Setting camera sensitivity is the crosshair setting without the scope-in. A camera sensitivity settings are shown below as a sample. One thing, every player should keep in mind that, should not copy other player's sensitivity. You guys should make your own Sensitivity Settings by spending time in the training ground. This will helps you in gameplay. ADS Sensitivity Setting ADS Setting is to control your recoil of the gun with a finger's just pulling down. This type of setting is used by those newbie players, this is for without Gyroscope. Many professional players also use these techniques to control recoil. Gyroscope Sensitivity Setting Gyroscope is another way of controlling the gun's recoil and for moving crosshair. In this type of Setting players just have to tilt their device to control recoil and move crosshair. In this setting, very easy to control recoils of the guns than the ADS, for this perfection is required. Conclusion I hope this was helped, and this setting will help you to get Chicken Dinner.
