# What do you expect to learn in this subject

What do you expect to learn in this subject media and information literacy. What do you want to learn in this subject. What i have learned in this subject. What do you expect to learn in this subject which can help you at present and in the future. What do you expect to learn from this course. What do you expect to learn in this course subject- philippine criminal justice system. What do you expect to learn in this subject (criminal law book 1). What do you expect to learn in this subject nstp.

Student comments This set of unlated comments coming from one of my recent online classes. I hope to give you some information about the course and content of recent users. Question: Let me know what you like and you don't like the lesson. How about web-lab? How can I improve the format? I really appreciate the negative and positive feedback. I really liked the online course. I thought it was well planned and spread, easy to follow. The workload (H.W. & Test) was enough, so you can finish everything with enough time, know the topics and don't feel uploaded and hurry. Overall I really like this class because all the lessons, assignments and tests are straight forward. A couple of things I don't like about the class are that there should be more extra credit opportunities and it would be great if the final was a goal on what we learned in this class or what we like about the class. I think I have more knowledge of the ocean, time and marine life and, I hope, I can use them in real life. The course was all you said it would have been fun but a lot of work. And it was! I enjoyed the web-labs because they were a lot of fun and easy to understand. And the answers were usually somewhere in the text. I also liked the tasks that required us to get online. Sometimes the items apart from the reading book gave me a better idea and understanding of the subject for that week. What I didn't like was the short question of the wise because I found it difficult to explain some concepts without introducing somehow, ideas from the notes of the course or book (keeping in mind the plagiarism). I didn't expect to learn both from an online class; Now I see the ocean life in a completely new way. I know I could do better, but in the end I learned that an online class could be so much work or more than a normal class. However, I still liked it a lot. I really liked this class and the format in which it was presented. For me, I learned and store much more through an online class due to the fact that you can take the course as an open book. This really makes me look for the answer and in return, I keep more information. I found it relaxing in order to transform the work into assignments and tests to my liking and when I had time. I liked the fact that it was very clear that more research on the internet can be necessary for some tasks to be honest; there is nothing that I don't like the course. I will definitely take another course online from you! To be honest, this was my first class online, I can't wait to take more lessons online. The experience of this class is not positive. I thought the gross point of contour / power was extremely useful. Tasks, quizzes and tests were I would have enjoyed living a field trip to Carlsbad or Oceanside, my only suggestion would be to have more days available for those who can not do it on the hour/day. Maybe a trip later? Or another weekend? I have to say that this course has made me more aware of current events related to the ocean and climate. I also did something for the first time as a resident of Northern County, participated in the annual grunion race in Carlsbad. Enjoy the summer Mr.T. I really enjoyed getting to know the tidal pools and local labs.I originally enrolled in this course because I'm not from CA or even from a coastal area (I'm from WI) so I thought it would be nice to learn a bit about waves waves and currents as I ventured into the water a little longer I lived here. I had no idea the depth of the course I really liked the online option of this course because I am a very busy person (2 jobs and college).The only thing that initially confused me was all the different resources.Â At the beginning I had difficulty finding the answers to the questions because I did not know where to look.Â The book, the notes, PowerPoint presentations, web-labs, the CD with the book It was just a bit too much, but as the semester progressed I got the impression and benefited from all the information.Â I'll say I learned quite a bit in this course, I also enjoyed it. This speaks volumes.Â The assignments were very useful for the whole learning process.Â Is if there's one thing I'd like to recommend to help the class it would be an accompanying audio lesson to the power points.I think this would have clarified some of the points I had neglected to focus on.Â Some food for thought, so thank you for an amazing class.Â " Â " Â " I really enjoyed the It worked well with a very intense programming, and expectations were clear and in advance.Â One disadvantage was that if you didn't understand a lab, or the lab data that was provided, you were hard to find the answers from the weblab.Â However, I thought that the weblab were very interestign and very realistic and I thought the class notes following each chapter were very well detailed and the book supported the chapters a very well.Â I really enjoyed taking your course.Â Even if it's not an important topic or one I'm pursuing, I really did.Â You were very good at telling your students when things had to go and where to find all the necessary material, to correctly answer the questions you were asking. The only thing I really had a problem with was understanding it, and telling you that I understood the questions at hand. Also, I had to manage my time better, instead of leaving things at the last minute, but this was by no means something you did wrong.It's it's I thought the It was pretty good actually I think I learned a lot from this class. This isMy first online class and I thought your tasks and tests made me think and look for the answers that make me learn more. I also liked how you connected a lot of topics to our coast and San Diego area. The only thing I can criticize is that I felt that my homework prepared me for the test very well, although I did well on most tests I really wanted to have a study guide for at least the last one then I thought that this online class was organized very well. Overall I enjoyed the course. I liked everything straight. There has never been confusion about assignments, which is always an advantage with online courses. I took online courses in which the assignments would be confusing and the teacher was slow to respond to emails. The only thing I didn't like was that you couldn't look at an assignment after the expiration date. If you have not been able to activate the assignment in time you have not been able to look at the assignment to try to turn it late. Despite this, I had a good time. Online Oceanography was a great experience for me. I was very interested in ocean systems and mechanics and this class filled all my expectations. The parts of the class I like most were those of the second half of the semester when we started talking about the dynamics of the ocean because it was a more tangible subject of theories, physics and chemical subjects we treat in the first half. I really enjoyed doing virtual labs. I wish we had more, since it was a great learning experience. I felt like I learned the whole concept better and it was easier than just reading it from the book. In my case, I was taking another 6 classes and if it wasn't for the easy accessibility that this online class gave me I wouldn't be able to take it first. It was actually my most fun course. He had the most work to do by far and this is what in turn made it more enjoyable. I was forced to learn and I love to learn so that...s because it was my favorite. I took geology unknowingly, so the first two weeks I had identical jobs and that was cool. I would always prefer to be out of enjoying myself, but of course the required workload that I commit a little time to finish it. I wish I hadn't had a bad start because I dropped behind my reading and once you did that it ended. But I'm going to finish reading the book. The parts I read are marked as crazy so I won... Don't be re-reading anything. I don't have a car and I'm in the reserves so I couldn't take part in the trips and I had to work on some of those weekends anyway. I think some more credits that didn't require driving away would be nice. Even in mineOnline class The instructor sent a message at the end on the grading scale and said we could stop when we received the degree we were shooting. I was I was Also for the classification system in this class, because sometimes if you have a b in a class and there is no way to get an A or a C, whatever you do, then stop could be the way simpler. I'm not a science person in any way and generally groin at the thought of having to take a science course, but I would recommend this course to anyone. It was simple, organized, and I thought the laboratories were really very interesting, rather than confused. I had a bit of problems remembering the expiration dates of the tests, but I appreciated that the tasks were due with an easy program. I don't know if I have recommended changes for you, because I think you managed your class very correctly. The course was very detailed and organized. Sometimes, I would like to have taken in a traditional way due to the complexity of some arguments. However, overall, I found it effective and I liked it. I liked to access the information at any time of the day. I never interested so much at the subject, after all. I had problems with the speed web page speed. I have a high speed connection and I've always had problems with the web page that was too slow. I would have liked more credit opportunities. Mr. ... Turbeville e Aj.I liked this course At home pre-algebra homework I couldn't remember how to make it been out of college for almost 14 years.. I thought it would be a good idea to revise. Semester a lot and I thought why not add a class this semester together with my mathematics. I have always appreciated the science so that it was what I started looking for in.â, my first choice was filled first to be able to enroll so I had to go back and re-evaluate my choices and the oceanography seemed fun so I ended up here.â, I must say that I learned so many things I learned probably I would never have known if I had not taken This course is, I think my favorite part of the course was towards the end when we worked through the web labs.â, I would like to have time to take a real laboratory because I would really like all those hands on stuff !! Â, I think the most difficult part of the course for me is the fact that it is interaction (in person) with you or other students (an important fall of online classes) .â, my grades were ok. But as they really are. Even I never felt that I was f Acendo a good job.â, it meant a lot for me even though when I received the letter he recommended me to be a tutor.â, wow I think I did ok !! Â, even if I'm not able to do it because work already full time and my three children keep me busy Thank you!! Â I still don't know what courses I'll attend in autumn but maybe you'll see me around again! I had a great time. A lot.biological aspects of the class, in particular the various species of marine life and their interaction and place in the food chain. My less favored parts of the class were the math-heavy sections. Overall I feel I have learned a lot over. I really enjoyed the biological aspects of the class, especially the various species of marine life and their interaction, and place in the food chain. My less favored parts of the class were the math-heavy sections. Overall I feel I have learned a lot over. It 'was a very interesting course for me. I am not a great scientific person, but I found myself wishing that I would take this to my lab instead of biology. Although the course was well prepared and organized, it was structured and easy to follow. The workshops were very informative and I learned a lot in this class. The online materials are a great help for the book. Thank you and good summer! I liked the tasks that have linked the issue to relevant and contemporary issues: global warming, phytoplankton and primary production, etc. I'm not sure what I would change about the course. Perhaps an additional reading on matters relating to oceanography. I know câ is a lot to do with regard to the political scene. I really like this course. I would only have taken a lesson in which I have to be in class. I think it would be much more interesting. Since I have an F, it probably gonna take ', if possible, and this time I'll take' the lesson and I'll sit 'for a place in the class room. It seemed that some of the materials were a bit 'difficult to understand. The downside of this class was not able to sit in a classroom environment and talk to an instructor to ask questions and get feedback. Although I got the e-mail option, I need an answer at that time and did not have the option of waiting (@ because I was only able to use the weekend to enter and work full class). The part of the class is that I like was to have the flexibility to access my comfort for homework. They are generally a night owl and have access to 11 or 12 at night was great for me !! I also like the notes of the course provided by the instructor. They were easy to follow and very informative. I really enjoyed this class !!!! ... Especially the virtual laboratories. I think it would be nice and interesting videos related to oceanography. I really can not think of anything I would change ... you were great !!! Thanks. I really enjoyed this course. I appreciate the effort put in and the notes. I know that most online teachers have many options to avoid this actually work or even affect student learning. This was my first online course and I would like to thank you for the great experience. I know I had a problem with a But it was just a really inevitable situation on my part. my. It hasn't ruined my chance for a good grade in the course since I've worked very hard the whole semester. Anyway, this was an awesome course and I would recommend online courses for my fellow students who have tight schedules. It was a very simple class, which was good for me because I've never taken an online class before. Although once figured out there was a separate test section (long after the first test was taken) I was (and still am) afraid of not getting a C in this class, although this was my fault for not being observant. I am interested in oceanography for a few reasons for one who lives near the ocean and affects my daily life. I was surfing (but I cant anymore because of an ear or thyroid problem) but my brother still does so I am often aware of the current conditions. I especially like the ocean for her life, that I have my little 55-gallon ocean in my room. Understanding the ocean better helps me to be able to take care of my fish and my causes. I especially liked the assignment of the web lab. They were simple and had a lot of good information and pictures. I also enjoyed it because a lot of the data was taken from beaches or tidal pools that I often visit. Let's start with what I liked. I liked the tests because they were given with a considerable amount of time to do so. I liked that all the homework and also was given with a considerable amount of time. I liked that if I had a question you would answer in a quick time frame unlike some of my other teachers. This helped me indecisively. Finally, I liked the fast grading. I've had classes where it takes forever for me to get my tasks classified so I know how good or bad I've done. What I didn't like so much was a part of this final! I don't know, but for me some of this stuff I can't find in the book. I didn't like the studies in the respect that doesn't warn you when a test, etc. is coming up. She should warn you when you go to the class homepage. So there are some ups and downs, but overall I really enjoyed this class and I recommend you as a teacher. Thanks for a great semester and see you around! This is my second online course ever and I would like to say that I really enjoyed it. The weblabs were great and I thought the course notes were very informative and complementary to the readings. The pictures and graphs in the labs helped me understand what I was studying. I think the simplicity of this course and the way you designed it online work really well to help students process the information and maintain it. The assignments at the beginning of the semester were relatively long, but I thought everything was very fair and the questions were well presented. The only thing I didn't like about it It was the beginning of the semester the dates for the assignments were different from the rest of the year. Some were due to the half of the week and then the rest was due on Sundays. I think you're fading very well And I really liked to take oceanography !! This has been an opportunity that has not been given to me to my current four-year university. Thanks again Mr. Turbeville! I liked the material that was covered in the class. I took this lesson because oceanography was something I didn't know anything absolutely. That being said, I expected the means with which the concepts were presented and I expected to be very simpler than them. For a class that should be an introduction to oceanography I often felt as if there was a prerequisite class I lost. The book was to the fullest on some topics so I had to look at various other sources to get the answers I needed for tasks and test questions. I found the experience of having to search and compile information from more extremely discouraging sources; Especially in an online class where access to the instructor is best limited. I really appreciated this class and I acquired a lot of knowledge. The only minor complaint I would have been about the formation of many questions. Sometimes I heard that they weren't scrupulous enough to leave me insecure if I understood the question or I would be able to respond sufficiently. For everything, I enjoyed a lot in this class. I liked John gave us extra credit for writing organization and extra problems. I liked the instructor has a quick response. I liked that the notes of the course and the power point are really useful, which make it easier to understand the textbook and includes more information that sometimes does not show on the text. I liked that even if you turn home late, you don't lose all the scores and you still have 1 week more. This course was quite challenging but it was fun to take the laboratory at the same time to apply the knowledge acquired by the lesson. The lesson.
