Largest blast furnace in the world

Of Mike, Facty Staffupated: on 4 July 2010 they are in the mountains, under the sea level and on every continent on earth. Technically defined as a basin full of water surrounded by ground, the lakes are most commonly found in the spacing areas, in the mountain areas and in places with glaciers. Although the volume of water in the lakes is measured, when they list the largest lakes of the world most people look at the water surface. Although the lakes are all over the world, most larger lakes are in Africa and North America. Like the Great Bear Lake, the Great Slave Lake is located in the territories of the north-west of Canada and is frozen for eight months of the year. It has a surface of 10,502 square miles. The great slave Lake is called for the first nations people who have been called Slavey from Cree. The city of Yellowknife was founded on the shores of the lake when gold was discovered in the area, and it is now the capital of the north-western territories. Photos.com / Getty Images Lake Malawi is also known as Lake Nyasa and is the second deepest lake in Africa. Most of the surface area of 11,400 square miles of the lake is located in the village of Malawi, but also has shores in Tanzania and Mozambique. The lake is home to more species of fish than any other lake in the world, and the Malawi Lake National Park helps protect these fish and aquatic habitats. Jacobbeukman / Getty Images Great Bear Lake is the largest lake located entirely in Canada. It is located in the territories of the north-west of the Arctic Circle and has an area of 12,029 square miles, which is frozen for eight months of the year. A stringed ice road through the lake for the Deline community. The lake is in a remote area and is used as a base for hunting and fishing. Located in Russia, Lake Baikal is the largest freshwater lake in the world when measuring volume and has a surface of 12,248 square miles. In fact, it contains more than 20% of the surface surface of the world and more water of all the great lakes of North America combined. Lake Baikal is a UNESCO World Heritage Site and hosts about 1,800 vegetable and animal species, including the Baikal seal, one of the only three kind of freshwater seals in the world. Andreigilbert / Getty Images Lake Tanganyika is the largest freshwater lake in the world. He also has the second highest volume of water and is the second deeper lake of fresh water after Lake Baikal. The surface is 12,700 square miles and water from the lake flows to the Congo river and the Atlantic. Lake Tanganyika is divided between Burundi, Zambia, Tanzania and the Democratic Republic of the Congo. Supports a great fishing that provides a large portion of protein à €
