Harivarasanam instrumental ringtone

The first step in adding a ringtone to your phone is finding one that you like. Generally, this means checking out one of the dozens of ringtone sites on the Internet and picking a good one that's compatible with your phone model. Some sites charge for the use of their ringtones, to cover song royalties, among other things, and some sites provide tones for free. A lot of older songs (such as classical pieces) have been around long enough that their copyright has expired -- they've entered the public domain, so they're free for anybody to use.Once you've found a ringtone you like, you just have to get it into your phone's memory. There are a number of different ways to do this, depending on your particular phone model. The three major ways to add a new ringtone are:Load the ringtone program into the phone from a computer, via a data cable.Send the program to the phone over the airwaves.Type the program into the phone directly, using the keypad.Phones may use one particular method exclusively, but a lot of phones have multiple options. Check your instruction manual to find out what your phone can do.If you have the right phone, software and computer configuration, loading ringtones through a data link or infrared interface may be the simplest option, but it requires some work and expenditure to set everything up initially.A more popular method is to send the new ringtone to your phone over the airwaves. This approach originated with Nokia, but other manufacturers have since added this capability to their phones. The basic idea is to send the phone a special sort of text message that contains the program for the ringtone -- in most phones, this is done using either Short Message Service or Enhanced Messaging Service technology.Nokia originally developed Short Message Service to send short text messages between phones. Later, Nokia and Intel created smart messaging, a special protocol for sending functional, non-text information through SMS. Basically, a "smart" SMS message is coded to allow the equipped phone to recognize it as a graphic, ringtone, etc.The most common method for transferring ringtones over the airwaves is to visit a ringtone Web site, pick out a tone, enter your phone number and let the site administrators send the message to your phone directly. Alternatively, you can use an SMS gateway site to send a specific message to the phone yourself. This means finding the code for the ringtone you want, finding it in the appropriate format (Nokia binary format, for example) and copying it at as a smart message.Cell phones with a melody composer let you type in ringtones directly. The easiest way to use this feature is to find the appropriate "keypress sequence" for a tune on the Web. This sequence will tell you which buttons to press on your phone, in composer mode, to program the ringtone you want (check your instruction manual for details on your phone's composer mode). Of course, for the ringtone to work, the sequence has to be in the right format. Fortunately, you can find tons of sequences online for most phone models.As cell phones evolve, ringtones will get more complex as well. Already, some phones are boasting polyphonic ringtone capability, meaning the phone can play more than one note at a time, allowing for richer, harmonized tunes. Some new phones let you record songs and voice messages for ringtones yourself. Many of these models also let you assign different ringtones to different incoming numbers, so you know who's calling you without even looking at your phone. Before long, ringtones will have graduated from an extraneous thrill to an essential phone feature.For details on various ringtone formats, as well as hundreds of available ringtones online, check out the links on the next page. If you've gotten sick of the ringtones that come with your Android phone or iPhone, it's easy enough to buy new ones. But before you do that, there are a number of sites where you can get free ringtones. We've rounded up some of the best. Will My Phone Support All Ringtones? If you own an Android device, things are simple. You can download ringtones to your Android phone directly, since it supports MP3 files as ringtones. You can even create your own custom ringtones for Android if you want. RELATED: How to Create Custom Ringtones for Your Android Phone With iPhone, things are a little different. Most of the sites we've included in this article let you download MP3 files. But, the iPhone requires ringtones to be in their own AAC format, and they have an .m4r file extension. You can use MP3 ringtones, but you'll have to download them to a PC and convert them before you can use them on your iPhone. We've got a full guide on adding custom ringtones to your iPhone that covers how to do that conversion in iTunes and then transfer the ringtones to your phone. You can even use that same technique to make ringtones out of your own music or sounds. RELATED: How to Add Custom Ringtones to Your iPhone Is Downloading Ringtones from the Internet Safe? That all depends on where you get them, and which ones you download. There are plenty of shady websites on the Internet that try to lure you in with free ringtones. A good test is to see if the website is full of ads or asks you for money. Another common tactic is that websites will show you some ringtones, but when you click the link, the site tries to download something else. Always pay attention to the file extension to see if you're downloading the file that you requested. An executable file extension (exe, msi, dmg, apk) is a huge red flag. Then there is the issue of legality. Most websites have a mix of ringtones, some legal and some not. Obviously, if you're getting ringtones for songs from the last several decades, they're probably not not legal, and we would recommend that you stay away from them. It would be safer to buy ringtones like that or, if you already own the song, to make your own ringtone from it. So, with that out of the way, here are our top websites for downloading ringtones. Zedge Zedge hosts a variety of user-created ringtones. You can search for ringtones on the site, but the site offers no other real organization—there are no categories to browse. As you keep scrolling, more and more ringtones are loaded onto the screen for you to choose from. You can preview ringtones on the main page or the dedicated ringtone page where you also have the option to download them. Zedge also offers apps for iOS and Android which surprisingly have better interfaces and let you browse categories. Notification Sounds Notification Sounds is not the typical ringtone website. It's a place where you can get ringtones similar to the ones you expect to be pre-loaded to your phone by your phone manufacturer. The ringtones on the website are organized by categories or tags, and there are plenty of both to explore. The handy preview option lets you listen to ringtones quickly, even on mobile devices. Once you find a ringtone that you like, you can download an MP3 version (for Android devices) or an M4R version (for iPhones). If you have Android, you can download the ringtone directly to your phone. If you have an iPhone, you'll have to use iTunes to transfer the ringtone to your device. One thing to keep in mind about Notification Sounds is that most of the ringtones they host are meant to be used for notifications, not ringtones, so they're pretty short. If you're looking for ringtones for calls, the selection is more limited. Melofania Melofania is an amazing website for ringtones with a ton of features. Not only can you browse the music of various artists and download their ringtones, but you create ringtones from YouTube videos or even upload your own music. You can find your favorite ringtones using the search function on the top, and then preview the ringtone on its page. You'll find a few different variations of the ringtones to choose from. Once you've selected a ringtone you like, click the Android or iPhone button and the ringtone for the specific format you need. And once again, Android users can download directly to their phone, but iOS users will need to use their computer and iTunes as an intermediary. Important Note: As we've mentioned, downloading ringtones made from popular songs is infringing on copyright. Therefore we recommend that you use Melofania only for the music that you legally own and have the right to modify and use as a ringtone. MyTinyPhone MyTinyPhone has a gigantic collection of ringtones totaling over half a million. The ringtones are neatly organized into multiple categories like Jazz, Rock, Themes, Voice, Fun, and more—making them easy to browse. Each ringtone has a star rating and a view count, which makes it quick to filter popular ringtones. One small annoyance, though, is that you can't just click the big play button shown on the category pages to sample the ringtone. Clicking it takes you to that ringtone's page, where you can then listen to it. It's kind of a drag. Still, it's worth putting up with for the huge selection and solid categorization. You can download ringtones in either MP3 or M4R format. Audiko Audiko is another popular website that lets you download user-created ringtones. It also lets you create your own ringtones by uploading your favorite songs. On the homepage, you'll see the most popular ringtones, SMS ringtones, and the top artists in your country. Scroll down a bit and you'll find links to popular genres that you can check out. When you open a specific ringtone's page, you'll see an option to listen to the tone and its variations. If you like the ringtone, you can click the download button to start the process. Unfortunately, you'll have to create an account to download ringtones from Audiko, but the upside is that all your downloaded ringtones are saved in your account, and you can download the iOS or Android versions for them anytime you like. Audiko does have an Android App, which is free to use and does all the things that you can do on the website. A paid iOS app is also available for \$0.99, but we suggest you not bother with that. It has the same functionality as the free website, and you're going to need your computer and iTunes to transfer the ringtone to your iPhone anyway. Image Credit: Gts/Shutterstock This article shares resources for downloading ringtones from free, legal ringtone websites, as well as creating your own ringtones using your existing digital music collection. Downloading free ringtones from the internet is the quickest way to get ringtones for your phone. It's completely legal as long as you stay away from the sites on the internet that host illegal cellphone content, such as videos, games, software. It's smart to not infringe on copyright. Hero Images/Getty Images Confine your searches to free and legal ringtone websites. They include: Mobile 9 Zedge Notification Sounds MyTinyPhone A selection of free apps for Android and iPhones contain large categories of ringtones. Some even walk you through making a ringtone from a song you already own. Download these apps at Google Play for Android phones and the App Store for iPhones. Ringtone Maker Audiko Ringtones Free Zedge Ringtones Hip Hop & Rap Ringtones An audio editor is a type of software program that makes it easy to manipulate your music files in several ways. It includes the option to make short audio clips that are ideal for ringtones. If you have a few songs in your music library that you'd like to transform into ringtones, then an audio editor is a must. Audacity is the best known of these programs. Rather than using a full-blown audio editor, you can quickly make ringtones using an audio file splitter. This type of program doesn't have all the bells and whistles of an audio editor, but if all you want to do is make ringtones, then this type of audio tool is a good alternative. The top free audio file splitters article for slicing up your music include: WavePad Audio File Splitter Mc3splrt If you thought that your iTunes software media player was just good for playing your music collection, think again. With a little bit of work, you can create free ringtones for your iPhone using tunes you already bought from iTunes without having to pay for Apple's ringtone conversion service. Thanks for letting us know! Tell us why! Go to Settings > Sounds & Haptics > Ringtone. Find the ringtone you want to use and tap it. You can use a third-party app to create a custom ringtone, then set it as your default using the above method. Change your phone's vibrations by going to Settings > Sounds & Haptics > Ringtone > Vibration. Choose a preset or custom vibration. This article explains how to change the default ringtone on an iPhone. It's one of the easiest ways to customize your device. Instructions article apply to iOS 12 and up, but the steps and functionality are similar for older versions of iOS. To change your iPhone's default ringtone, follow these steps: Tap the Settings app > Sounds & Haptics (on some older devices, tap Sounds). In the Sounds and Vibration Patterns section, tap Ringtone. On the Ringtone screen, tap a ringtone. Each ringtone you tap will play so you can hear what it sounds like. The iPhone comes with dozens of ringtones pre-loaded. If you want to buy new ringtones, tap Tone Store (on some older models, tap Store in the upper-right corner, then tap Tones). Alert Tones are normally used for alarms and other notifications but can be used as ringtones. When you find the ringtone you want to use as the default, tap it so that the checkmark appears next to it. To go back to the previous screen, tap Sounds & Haptics in the upper-left corner or click the Home button to go to the home screen. Your ringtone choice is saved automatically. Whenever you get a call, the ringtone you selected will play unless you assigned individual ringtones to callers. If you've set a specific ringtone for an individual, that ringtone plays instead. Just remember to listen for that sound, and not a ringing phone, so you don't miss any calls. By default, the same ringtone plays no matter who calls you. But you can change that and make a different sound play for different people. This is fun and helpful: you can know who's calling without looking at the screen. Learn how in How to Set Unique Ringtones for Each Contact on Your iPhone. Want to use a favorite song as a ringtone instead of one of the iPhone's built-in sounds? You can! You just need a little bit of software to create your own ringtone. Find the song you want to use and get an app to create the ringtone. After you install the app, create the ringtone and add it to your iPhone. You can also change the vibration pattern the iPhone uses when you get a call. This variation can be helpful when your ringer is turned off but you want to know you're getting a call. It's also useful for people with hearing impairments. Vibrations are created by the iPhone's support for haptics. To change the default vibration pattern: Tap Settings. Tap Sounds & Haptics (or Sounds). Move either the Vibrate on Ring or Vibrate on Silent (or both) to on/green. In the Sounds and Vibration Patterns section, tap Ringtone. Tap Vibration. Tap the pre-loaded options to test them or tap Create New Vibration to make your own. To select a vibration pattern, tap it so that a checkmark appears next to it. Your choice is automatically saved. Just like ringtones, different vibration patterns can be set for individual contacts. Follow the same steps as setting ringtones and look for the Vibration option. Problems with ringtones can lead to an iPhone not ringing when calls come in. But there are a number of other things that can cause that problem. Learn how to solve them in How to Fix the iPhone Not Ringing Problem. Thanks for letting us know! Tell us why!
